Women the Best Conversers.

Of one thing there can be very little doubt, and that is the greater readiness in conversation of women than men. A woman can create conversation, which is a very useful thing and is frequently found a great social difficulty. If we give a man a subject on which he knows anything at all, unless he be a fool or morbidly reticent, he can talk about it so as to make himself fairly intelligible, and perhaps interesting, to those for whom the subject has any interest at all. Men, when their feeling of enthusiasm is excited, throw off the slow and hesitation which frequently cramp their power in society, just as they throw off the physical infirmity of stuttering under the influence of some awakening theme or some strong sympathy.

But the power of conversation in some women, and not always those of remarkable ability, is the very art of making talk without straw. They will talk to one by the hour about nothing—that is, on no particular subject and with no particular object—and talk coherently and not foolishly and without very pleasant all the time. It would, were we free to confess, be rather difficult for the listener to carry away with him any mental notes of what has been said. He may not be conscious of having gained any new ideas or of having had his old ones much enlarged, but he will rise and go his way, as one does after a light and wholesome meal, sensibly cheered and refreshed, but retaining no troublesome memories of the ingredients which have composed it.—New York Ledger.

The Glove Habit. The wearing of gloves is a more ancient custom than it is generally thought to be. Homer speaks of gloves and tells of one who wore them to protect his hands while working in his garden. The use of some coverings for the hands was known to the ancient Persians, and Old Testament writers also mention them. They were in such common use among the Romans that they were worn even in the wild country by the Britons. St. Anne, the mother of the Virgin Mary, was it has been said, a knitter and manufacturer of gloves, for which reason the glove-makers of France long ago made her their patron saint. At one time gloves had a certain meaning attached to them and were chosen to show the character or occupation of the wearer. There are records of gloves being ordered for "grave and spiritual men." About this time, the sixteenth century, gloves made of chicken skin were used by both men and women for whitening the hands and were worn at night.—New York Tribune.

Weekly Crop Bulletin. (For week ending Monday, April 19, 1904)

The winter season of 1903-4, while unusually severe, was not particularly unfavorable to winter grains and grasses, as the snow which fell the latter part of November remained on the ground until the latter part of March, furnishing ample protection to the grains and grasses during the periods of intense cold. Since the disappearance of the snow the alternate freezing and thawing has been detrimental to the crops and in some sections considerable damage is reported. The ground, as a whole, however, the condition of winter wheat, rye and clover is considered very satisfactory.

The season of 1904 opens about ten days or two weeks later than the average of the past ten years, and probably fully as late as the season of 1899. Farmers have been preparing for spring work for several weeks but thus far have been able to accomplish but little. The indications are that spring work will be late, as there was less ploughing done last fall than usual. The ground remains frozen generally in the northern and central counties, but is free from frost along the southern border. A severe snow storm occurred on the night of the 14th and 15th over the entire state. In some sections in the northern counties the snowfall amounted to 12 inches or more, much of which remains on the ground. The storm was followed by a cold wave of unusual severity for the season, the temperature falling to 10 degrees above zero in the far south as the southern tier of counties. It was fortunate that a considerable fall of snow preceded the cold wave, as the damage might otherwise have been considerable.

The soil is well strewed with moisture, but warm weather is needed to take out the remaining frost and to place it in condition to be worked.

Stock is reported generally in good condition, notwithstanding the severe winter. The large amount of coarse feed consumed during the season, and the fodder of this character scarce, and the price high.
