

THE BROWN MOUSE

By HERBERT QUICK

(Copyright by The Bobbs-Merrill Company)

CHAPTER XV—Continued.

"I didn't suppose I needed a bitting-rig—but I guess I did!"

Jennie ran away then to ask Nils Hansen and Bettina to join their dinner party. She had a sudden access of friendliness for the Hansens. Nils refused because he was going out to see the college herds fed; but at Jennie's urgent request, reinforced by puts and hugs, Bettina consented. Jennie was very happy, and proved herself a beaming hostess. The dear devoted herself to Bettina—and Jim found out afterward that this inquiring gentleman was getting at the mental processes of a specimen pupil in one of the new kind of rural schools, in which he was only half inclined to believe. He thanked Jim for his speech, and said it was "most suggestive and thought-provoking," and as the party broke up slipped into Jim's hand a check for the honorarium. It was not until then that Jim felt quite sure that he was actually to be paid.

Mr. Hofmyer was waiting to give Jim the final convincing proof that he had produced an effect with his speech.

"Do you teach the kind of school you lay out in your talk?" he asked.

"I try to," said Jim, "and I believe I do."

"Well," said Mr. Hofmyer, "that's the kind of education I believe in. I keep school back in Pennsylvania fifty years ago, and I made the scholars measure things, and weigh things, and apply their studies as far as I could."

"All good teachers have always done that," said Jim. "Froebel, Pestalozzi, Colonel Parker—they all had the idea which is at the bottom of my work; 'learn to do by doing,' and connecting up the school with life."

"M-h-m," grunted Mr. Hofmyer, "I hadn't been able to see how Latin connects up with a high-school kid's life—"

"Oh, then you haven't heard the news," said the colonel. "Jim's going to have his first make-to-measure suit for Ames. It's all fixed."

"What's making it?" asked Jennie.

"A Dane," queried Jennie. "Isn't he Bettina's uncle?"

"Ratherly," said the colonel jocularly, "seeing as how Bettina's Mrs. Hansen's daughter."

Clothes are rather important, but the difference between a suit made by Atkins, the tailor, and one built by Gosta Paulsen, the new Danish craftsman, could not be supposed to be especially important, even when designed for a very dear friend. And Jim was scarcely that—of course not! Why, then, did the county superintendent hastily run to her room, and cry? Why did she say to herself that the Hansens were very good people, and well-to-do, and it would be a fine thing for Jim and his mother—and then cry some more?

CHAPTER XVI
Jim Goes to Ames.

Jim had never felt more the upstart uneducated farm-hand than when he was introduced to that audience at Ames by Professor Withers, nor more completely disgraced than when he concluded his remarks. Even the applause was to him a kindly effort on the part of the audience to comfort him in his failure. His only solace was the look in Jennie's eyes.

"Young man," said an old farmer who wore thick glasses and looked like a Dutch burgomaster, "I want to have a little talk with you."

"This is Mr. Hofmyer of Pottawatomie county," said the dean of the college.

"I'm glad to meet you," said Jim. "I can talk to you now."

"No," said Jennie. "I know Mr. Hofmyer will excuse you until after dinner. We have a little party for Mr. Irwin, and we shall be late if we don't hurry."

"Where can I see you after supper?" asked Mr. Hofmyer.

Ever it was to satisfy Mr. Hofmyer; and Jim was carried off to a dinner given by County Superintendent Jennie to Jim, the dean, Professor Withers, and one or two others—and a wonderfully select and distinguished company it seemed to Jim. Jennie seized a moment's opportunity to say, "You did beautifully, Jim; everybody says so."

"I failed!" said Jim. "You know I failed. I couldn't remember my speech. I can't stay here feasting. I want to get out in the snow."

"You made the best address of the evening; and you did it because you forgot your speech," insisted Jennie.

"Does anybody else think so?"

"Why, Jim! You must learn to be here in what you have done. Even Con Bonner says it was the best. He says he didn't think you had it in you."

This advice from her to "believe in what you have done"—wasn't there something new in Jennie's attitude here? Wasn't his belief in what he was doing precisely the thing which had made him such a nuisance to the county superintendent? However, Jim couldn't stop to answer the question which popped up in his mind.

"What does Professor Withers say?" he asked.

"He's delighted—silly."

"Silly!" How wonderful it was to be called "silly"—in that tone.

"I shouldn't have forgotten the speech if it hadn't been for this darned boiled shirt and collar, and for wearing a cravat," urged Jim in extenuation.

"You ought to've worn them around the house for a week before coming," said Jennie. "Why didn't you ask my advice?"

"I will next time, Jennie," said Jim.

"I want to have a Talk with You." Unless he can find a Latin settlement somewhere and get a job clerical in a store.

"But it used to relate to life," said Jim. "The life of the people who made Greek and Latin a part of everybody else's education as well as their own. Latin and Greek were the only languages in which anything worth much was written, you know. But now—"

Jim spread out his arms as if to take in the whole world—science, the marvelous literature of our tongue in the last three centuries! And to make a child learn Latin with all that, a thousand times richer than all the literature of Latin, lying unused before him!"

"Know any Latin?" asked Mr. Hofmyer.

Jim blushed, as one caught in condemning what he knows nothing about.

"I—I have studied the grammar, and read 'Caesar,'" he faltered, "but that isn't much. I had no teacher, and I had to work pretty hard, and it didn't go very well."

"You had all the Latin they save in the colleges of my time," said Mr. Hofmyer. "If I do talk dialect; and I'll agree with you so far as to say that it would have been a crime for me to neglect the chemistry, bacteriology, physics, engineering and other sciences that pertain to farming—if there'd been any such sciences when I was getting my schooling."

"And yet," said Jim, "some people want us to guide ourselves by the courses of study made before these sciences existed."

"I don't, by hokey!" said Hofmyer. "I'll be dog-goned if you ain't right. I wouldn't 'a' said so before I heard that speech—but I say so now."

Jim's face lighted up at this, the first convincing evidence that he had scored.

"I believe, too," went on Mr. Hofmyer. "That your idea would please our folks. I've been the stonemason in our parts—mostly on English and—say German. What'd ye say to coming down and teachin' our school? We've got a two-room affair, and I was made

WINDING GRAINS OF TWO TREES

Sections of Red Maple and Sourwood Show Twisting Growth in Different Directions.

There are two common trees in the eastern United States which admirably illustrate in their winding grain the opposite tendencies in direction. These are the red maple and the sourwood, or sorrel tree. Both trees are distinctly inclined to form a twisting growth, and in practically all cases of pronounced twisting the maple turns to the left and the sourwood to the right. Not more than one or two trees in a hundred of either species will be found departing from this rule.

No very satisfactory attempt has been made by scientists to explain why so many plants of twining habits have adopted definite and constant

a committee of one to find a teacher."

"I—I don't see how—" Jim stammered, all taken aback by this new breeze of recognition.

"We can't pay much," said Hofmyer. "You have charge of the discipline in the whole school, and teach in Number Two room. Seventy-five dollars a month. Does it appeal to you?"

Appeal to him! And yet, how about the Stimmess, Colones, Woodruff, the Hansens and Newton Bronson, now just getting a firm start on the upward path to usefulness and real happiness? How could he leave the little, crude, puny structure on which he had been working—on which he had been merely practicing—for a year, and remove to the new field?

"I'm afraid I can't," said Jim Irwin.

"If you're only 'fraid you can't," said Mr. Hofmyer, "think it over. I've got your post office address on this program, and I'll write you a formal offer. We may spring them figures a little. Think it over."

"You mustn't think," said Jim, "that we've done all the things I mentioned in my talk, or that I haven't made any mistakes or failures."

"Your county superintendent didn't mention any failures," said Mr. Hofmyer.

"Did you talk with her about my work?" inquired Jim, suddenly very curious.

"M-h-m."

"Then I don't see why you want me," Jim went on.

"Why?" asked Mr. Hofmyer.

"I had not supposed," said Jim, "that she had a very high opinion of my work."

"I didn't ask her about that," said Mr. Hofmyer, "though I guess she thinks well of it. I asked her what you are tryin' to do, and what sort of a fellow you are. It was favorably impressed; but she didn't mention any failures."

"We haven't succeeded in adopting a successful system of selling our cream," said Jim. "I believe we can do it, but we haven't."

"Wal," said Mr. Hofmyer, "I'd know as I'd call that a failure. The fact that you're tryin' of it shows you've got the right ideas. We'll write ye, and maybe pay your way down to look us over. We're a pretty good crowd, the neighbors think."

CHAPTER XVII

Think of It.

Ames was an inspiration. Jim Irwin received from the great agricultural college more real education in this one trip than many students get from a four years' course in its halls; for he had spent ten years in getting ready for the experience. The great farm of hundreds of acres, all under the management of experts, the beautiful campus, the commodious classrooms and laboratories, and especially the barns, the greenhouses, gardens, herds and flocks filled him with a sort of apostolic joy.

"Every school," said he to Professor Withers, "ought to be doing a good deal of the work you have to do here."

"I'll admit," said the professor, "that much of our work in agriculture is pretty elementary."

"It's intermediate school work," said Jim. "It's wrong to force boys and girls to leave their homes and live in a college to get so much of what they should have before they're ten years old."

"There's something in what you say," said the professor, "but some experiment station men seem to think that agriculture in the common schools will take from the young men and women the felt need, and therefore the desire to come to the college."

"If you can't give them anything better than high-school work," said Jim, "that will be so; but if the science and art of agriculture is what I think it is, I would make them hungry for the advanced work that really can't be done at home. To make the children wait until they're twenty is to deny them more than half what the college ought to give them—and make them pay for what they don't get."

"I think you're right," said the professor.

"Give us the kind of schools I ask for," cried Jim, "and I'll fill a college like this in every congressional district in Iowa, or I'll force you to tear this down and build larger."

More nearly happy, and rather short-er of money than he had recently been, Jim journeyed home among the companions from his own neighborhood, in a frenzy of plans for the future. Mr. Hofmyer had dropped from his mind, until Con Bonner, his old enemy, drew him aside in the vestibule of the train and spoke to him in the mysterious manner peculiar to politicians.

(TO BE CONTINUED.)

Untrimmed Coats for Spring; "Little Brim Hats" for Spring

DESIGNERS of spring coats must have sensed in advance what the public wanted for their earliest models made an immediate success. Coats arrive very early, in the vanguard of the new season's apparel and the fate of any style is soon determined when winter is only fairly well under way. This year there entered a troop of attractive sports and semi-sports models, almost with the new year, and they were welcomed by opening pocketbooks everywhere.

Perhaps it was because the new fabrics suggest sports styles that manufacturers have given them so much attention. The looms have

Sports Model Spring Coats

turned out beautiful shadow plaids, soft stripes, attractive cross bars, polo cloth and other coatings that adapt themselves to the smart but casual flavor that belongs to sports clothes. Such fabrics forbid elaboration, being decorative themselves, and therefore the newer coats are very plain. Besides the charm of the fabrics there are gracious lines, lovely colors and unusual buttons to emphasize the character of the sports coat. Occasionally a model is shown with a fur collar keyed up to the style of the coat.

Two representative spring models

Hats Made of Fabrics and Braids

are pictured here, one in a shadowy plaid and the other in a graduated stripe that allows fine color blending. It is in the fabrics themselves that the interest mainly lies. They are soft and very becoming with fascinating new tan shades predominating, "copra-tan" and a near-of-kin called "Mexico."

Even in coats of plain twill fabrics there is much reserve in the matter of decorations. Pin tucks are used and an attractive new model shows leather-like emplacements on the collar and cuffs with figures in tinted leather against a plain background.

The small, close-fitting hat remains fine laces in black or brown are cleverly used, on trimmed and dress hats for dinner wear. The latter are usually wash-brained.

The tailored hat is in the limelight just now, along with the tailored suit which is making a triumphant return. Considering the excellent workmanship now required in millinery, prices are very moderate, and if one can be extravagant in any direction, the tailored suit and the tailored hat make the best returns for money spent on them.

Furniture With Tone.
Furniture that is adorned with inlay, applied ornament, or carving, serves to brighten any room materially. This is because they relieve the somber tones that most furniture possesses. The newest designs evidence an art and a variety that is certain to meet favor with the purchasing public.—Milwaukee Sentinel.

To Clean Leather.
To clean leather rub well with a cloth slightly moistened with tanned

lined oil and vinegar mixed together in equal parts and afterward rub well with soft dusters till every vestige of oil is removed. This treatment improves shabby leather chairs wonderfully.

Pillows of Felt.
Something new in the way of a pillow is one made of pale blue felt that is perforated. The pillow is lined with brilliant orange which shines through the perforated design. An orange cord outlines the cushion.

The Kitchen Cabinet

FEEDING THE CHILD

The child of the family being the most important member as to feeding, it is wise to follow the English custom of having a table for the children. Here there is no temptation for them to taste food what good for them, for it is not such of desired and there is no compromise between what they ought to have and what they want. The result when intelligently fed will be sturdy, healthy youngsters. Not so many American families follow this custom because of indifference, but more because of necessity.

In homes where they cannot be fed alone and properly they are too often allowed to eat at the family table where they usually cry and get what they cry for, for the sake of peace and at the sacrifice of health, manners and morals.

There are ways where meals may be simplified so that the children may be served at the same time without harm. One may restrict the diet of the adults to conform to the food needed for the children, having dinner at noon or letting the little people have a simple supper by themselves earlier in the evening than the dinner hour.

Children under five years of age should be given food easy of digestion, avoiding rich food of all kinds, pastries and cakes, except sponge. No rich puddings or sauces and very little meat, and that at long intervals.

Fortunately the child who has not been pampered and is in good health does not desire a variety of food. Good cooked cereals, toast, eggs, plenty of milk and fresh fruits, stewed prunes, orange juice every day with potatoes cooked in various ways and chicken once in a while, will be enough variety for any normal child.

One must remember that a growing child needs plenty of food to build the body and supply heat and energy, too, for his active body. A child's digestion is more active than an adult's and it is able to take an extra meal or two daily without trouble. A light luncheon in the morning and afternoon, if only a glass of milk or a slice of bread and butter, will be found quite necessary to keep the little active body growing properly.

The year's at the spring;
The day's at the morn;
Morning's at seven;
The hills are dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven—world!
All's right with the world!

—Robert Browning.

COMMON, EVERYDAY FOODS

A good breakfast dish for any winter morning may be made as follows:

Get a shank bone with plenty of meat, adding the chopped marrow; cook all until the meat drops from the bones. Let stand after cooking until the next day, then chop the meat fine. There should be three or four cupfuls of the broth. In this broth cook oatmeal, adding enough to make a thick mixture to mold. Cook until the oatmeal is well cooked, then add the chopped meat, season well and mold. Season with onion, celery salt or any desired seasoning. When cold cut into slices and fry. One may use cornmeal for this mixture making the scrapple which is so well liked.

Stuffed Peppers.—If there should be a small chop of lamb or pork left with not enough meat to serve the family otherwise, add a cupful of bread crumbs well-buttered to the meat after putting it through a meat grinder, a bit of chopped onion and the trimmings from the top of peppers which have been prepared to stuff. Parboil the pepper shells after removing the white fiber and seeds and place them in greased gem pans. Fill with the stuffing, add any bits of vegetable like a spoonful or two of peas, a few chopped nuts, a little peanut butter, or any good tasty food; even a small amount of cooked oatmeal will add to the taste ensemble. Bake until the peppers are thoroughly hot, then serve.

Scalloped Potatoes.—Cut a peeled onion into very thin slices and then into quarters. Melt three tablespoonfuls of fat, add the onion and cook very slowly on the back part of the range until softened, stirring occasionally. Slice a layer of potatoes into a buttered dish holding a quart. Sprinkle with onion, salt, pepper and parsley—continue until the dish is full; add milk or broth from leftover roasts until it can be seen through the potatoes. Bake until the potatoes are soft, then serve from the dish.

Codfish à la Mode.—Take one cupful of shredded codfish, two cupfuls of mashed potato well seasoned, a pint of milk, two beaten eggs, one-half cupful of softened butter, salt and red pepper to taste. Bake in a buttered dish twenty minutes.

Some men ponder over whether they shall invest \$100,000 that day and others over whether they can wear this collar another day."

ALL WOMEN WHO WORK

Should Know how this Worker was Made Strong and Well by Lydia E. Pinkham's Vegetable Compound

Zahl, N. Dakota.—"I was nervous and weak and was not regular. I also had pains frequently. I was sickly for seven years and finally had a nervous breakdown following an operation. I am a dressmaker and milliner and a lady I work for told me of Lydia E. Pinkham's Vegetable Compound. I am taking it and it has made me well and able to do my work again. I have even helped take care of a sick neighbor recently, so you can see how fit I am. I highly praise your medicine and you may use my letter as you see fit. I hope it will help some other woman."—Mrs. OLE NORD-LENN, Box 23, Zahl, North Dakota.

Over 121,000 women have so far replied to our question, "Have you received benefit from taking Lydia E. Pinkham's Vegetable Compound?" 98 per cent. of these replies answer "Yes." This means that 98 out of every 100 women taking this medicine for ailments for which it is recommended are benefited by it. For sale by all druggists.

SPOHN'S DISTEMPER COMPOUND

Horses and Mules
can be kept on their feet working if owners give "SPOHN'S" for Distemper, Influenza, Shipping Fever, Coughs and Colds. Cheapest and surest means of escaping these diseases. Occasional doses work wonders. Give "SPOHN'S" for Dog Distemper. Used for thirty years. 60 cents and \$1.20 at drug stores.

The Mother of Three Strong Healthy Children

Says Father John's Medicine Keeps Them Well

"One of my friends told me about Father John's Medicine and now I am telling all of my friends how much good it has done for my children," says Mrs. Vera Norton of Merrill, Wis. "All these children have taken Father John's Medicine when they were run down or had a cold and in each case I think Father John's Medicine is responsible for their improvement in health."

Father John's Medicine is a very high-grade emulsion of cod liver oil with other ingredients and is becoming known as the greatest body builder because of its success over a period of 67 years. It is guaranteed free from alcohol or dangerous drugs in any form.

Quite a number of young people from here attended the Hard Time party at Campbellsport Sunday evening.

Mr. and Mrs. Art. Engles, son Justin and John Engles of Armstrong were callers at the L. Buslaff home Sunday.

**McCormick - Deering
Tractor Features**

Ball and Roller Bearing at 28 points. Ball-Bearing Crankshaft. All wearing parts, including cylinders, replaceable. Entire main frame in one sturdy unit. All parts easily accessible, easily removed. Alemite lubricating system. Throttle governor. Large belt pulley. Adjustable drawbar. Water air cleaner. Three forward speeds. Comfort and safety features, such as steel platform, wide fenders, adjustable seat and foot levers, and handy brakes.

WARRANTY

The crankshaft and crankshaft ball bearings of every McCormick-Deering Tractor are now guaranteed against breakage for the life of the tractor. Ask for details regarding this remarkable guaranty—a feature offered with no other tractor.

**The McCormick-Deering 10-20
Tractor Is Now Ready For You**

Owing to the extraordinary demand for this sturdy 2-plow tractor, we have but recently been able to secure a shipment. Now we have them and are able to offer our farm friends the greatest 2-plow tractor value of the year. You are invited to inspect the new McCormick-Deering 10-20 we have on display here. Read over the important features shown at the left—then come in and ask us all the questions you can think of. But be sure to visit us soon, as our present supply of 2-plow tractors is limited. Don't miss this opportunity to get acquainted with the McCormick-Deering 10-20. We will also show you the McCormick-Deering 15-30—a capable outfit for the man who needs 3-plow power. Come in and see these two tractors.

Jamesway
Raises 200 to 500 Chickens in One Flock

See the New **JAMESWAY BROODER STOVE**

No other brooder like it!

Does the work of 15 to 20 other brooders—with less trouble, less worry, in less time, with greater results.

Gives a positive gentle circulation of clean, warm, fresh air to chicks. Many special features—far ahead of any other type of brooder stove ever introduced. Revolving lower, collapsible—easily moved or stored—positive draft control, etc. You should see it. Made by Jamesway Poultry Farm Engineers.

No-Waste Baby Chick Feeders

The most exceptional value in baby chick feeders ever offered. Handy, strongly built, and absolutely rigid. Keeps the feed clean and sweet. Special feed never permits waste of feed ordinarily thrown out and lost. Chicks can't get in and scratch around in the feed. Pays for itself in a short time. Insures against hungry chicks. Built for many years of hard service with unaccommodatingly 200 baby chicks. Can either be used in or out of doors.

Baby Chick Waterer

Built of heavy steel sheets, hot-galvanized. Practically a rust-proof and permanent waterer. Easily washed and thoroughly cleaned by removing water pan below. Pan detachable for cleaning and filling. Capacity 2 1/2 gallons for 100 chicks or less for 24 hours.

We carry a complete line of Jamesway Poultry Equipment on hand at all times.

MOTHERS IMPORTANT

Mothers should see that the whole family take a thorough, purifying system cleaning laxative this Spring. NOW IS THE TIME. The family will be healthier, happier, and get along better if the blood is given a thorough purifying, the stomach and bowels cleaned out, and the germs of winter accumulated in the system, driven away. HOLLISTER'S ROCKY MOUNTAIN TEA is one of the very best and surest spring medicines to take. Try it and see the difference in the whole family. Their color will be better, they'll eat better, sleep better and be well and happy.—Otto B. Graf.

United States Oil Lands Held Fast

Four Million Acres Withdrawn by Presidents.

Washington.—Public lands, believed to contain almost incalculable quantities of oil, aggregating more than 4,000,000 acres in continental United States, and approximately 25,000 square miles have been withdrawn from entry by successive presidents since 1893.

This was learned from a further examination of the records of the Department of the Interior, particularly those of the geological survey, which made the original surveys of the oil resources of the properties owned by the government and many of the recommendations which brought about the withdrawals.

This does not mean, however, that all the vast area of oil lands have been set aside for a future petroleum supply for the navy. Apart from the Alaska reserve, only a relatively small part of the acreage has been dedicated to naval use.

This acreage in continental United States is composed of naval reserve No. 1, Elkhills, California, 28,000 acres; naval reserve No. 2, Buena Vista, Cal., 29,341 acres, and naval reserve No. 3 (Teapot Dome), Salt Creek, Wyoming, 9,481 acres. These are the reserves where the government leases to the Doheny and Sinclair interests have resulted in the case now before congress.

The far greater areas of public lands withdrawn from entry are held by the government for general purposes. Some of the property may later be turned over to the navy, and some may be restored to entry and private prospecting permitted upon it.

Withdrawn by Taft.

It was in 1909, during the Taft administration, Secretary of Interior Ballinger persuaded the president to withdraw about 3,000,000 acres of oil lands in Wyoming and California. Subsequent withdrawals took place as follows: October, 1909, 124,000 acres in Utah and 85,540 acres in Wyoming; December, 1909, 87,478 acres in Wyoming; January, 1910, 147,887 acres in California; February, 1910, 448,000 acres in California; February, 1910, 9,190 acres in Wyoming; April, 1910, 29,736 acres in Wyoming; April, 1910, 37,314 acres in Utah; May, 1910, 419,490 acres in New Mexico, and January, 1910, 3,000 acres in Wyoming.

These withdrawals were all designated as temporary. Soon after they were ordered some question arose as to the authority of the president to take such action, and the matter came up in congress, where action was taken confirming the power of the president to provide for the reserve.

Still other withdrawals were ordered as time went on, all for the purpose of conserving oil resources of the nation, which happened to be located on government lands. The withdrawals in all told, amounted to 2,482,750 acres in California; 87,474 acres in Colorado, 314,730 acres in Louisiana, 419,091 acres in New Mexico, 74,840 acres in Oregon, 581,264 acres in Utah and 255,451 acres in Wyoming.

The first suggestion of a government oil reserve policy for the benefit of the navy was in the form of a memorandum from George O. Smith, director of the geological survey, to Secretary Gardner in 1906, referring to the increasing use of fuel oil by the British navy, and the possibility of the general use of such fuel by naval ships. A similar report was made by Dr. Smith in 1909 to Secretary Ballinger, who took the matter under advisement and later held it before President Taft.

The Taft order of 1909 followed, withdrawing large tracts of oil lands from entry. Three years later President Taft created the first of the naval oil reserves, now known as Reserve No. 1, in southern California. This was

in July of that year and set aside 30,000 acres of land for the exclusive use of the navy.

Two months later, upon the recommendation of the Navy department, President Taft created Naval Reserve No. 2, also in southern California, amounting to 29,341 acres. Both tracts were believed to be rich in oil, the richest perhaps of any of the oil lands which had been previously withdrawn from entry by the general order of President Taft.

It was in April, 1915, that President Wilson, upon recommendation of Secretary Lane, decided to turn over to the navy the Teapot Dome area in Wyoming, creating what is officially known as Naval Reserve No. 3. This was known to be rich in oil, and was part of the Salt Creek oil region where vast quantities of oil had been found.

Three times the Teapot Dome tract had been withdrawn. The first time by President Taft in his general order; the second time by President Taft in his second order under the new law, and a third time by President Wilson, when it was found that the navy would need even greater quantities of fuel oil than had been calculated on.

The last order of a president creating a naval oil reserve was that of President Harding, setting aside 35,000 square miles of oil lands in Alaska, an area larger than the entire state of

Here is pretty little Miss Sul Wang of Nanking, China, who was awarded her degree as doctor of philosophy at Northwestern university. President Walter Dill Scott, in conferring the degree, said she was one of the most brilliant students who has ever been at Northwestern.

Maine, for the exclusive use of the navy. Just how much oil there is in the oil reserve nobody knows. Geologists of the geological survey refuse to make any positive estimates. They have found seepage all along the Arctic coast and in many spots inland. Much of this area is totally unknown to man, except as it appears on the map.

Science Says Atom Tiny Solar System

Problem Presents Very Special Case of Map Making.

Washington, D. C.—Recently physics has conceived the atom to be a tiny "solar system." The question then arises: How big is an atom's universe, and how does it compare with our universe?

Making a model to give some little inkling of the size of our universe is not such an impossible task as might at first appear, says a bulletin from the Washington, D. C., headquarters of the National Geographic society, which classes the problem as a sort of "very special case of map making."

"Archimedes boasted that if he had a fulcrum and a long enough lever he could move the earth," says the bulletin. "Similarly the map maker or the model maker might say: 'Give me a scale small enough and I can model our universe.'"

"There must be a clear understanding of terms, however. It is not the universe that can be built to scale. That, outside the Einstein school, is generally considered infinite in extent; and no matter how tiny the scale the infinite, of course, could never be brought within the limits of a model. But there is a definite thing that may be called our universe whose limits astronomers have estimated—the space marked out by the distance to the outermost star of the Milky Way.

"Imagine this star to be a piece of chalk tied to a string, the other end pinned to the earth. Swing it about in every direction with the string taut and you will mark out a great sphere of space believed to be 350,000 light years across. A light year is the distance that light travels in a year, moving at the rate of about 190,000 miles a second. It is the yard stick of modern astronomy. A light year is in round numbers six trillion miles, and the distance across our universe is taken as 350,000 times six trillion miles.

Oat Smut Caused by Minute Plant

Enters Developing Kernels and Turns Them Into Powdery Masses.

Oat smut is caused by a very minute plant which lives parasitically within the tissues of the oat plant. It gains entrance in the seedling stage, about the time the plant is emerging from the soil. Which once inside it grows upward through the tissues of the stem, giving little or no external evidence of its presence until the heads are produced. At this time it enters the developing kernels and destroys them by forming black powdery masses in their places.

Important Parasite.

The black powdery substance is found to be made of millions of small, spherical, dark bodies called "spores." Spores represent the reproductive phase of the parasite and are important in that they are the means by which the smut is spread. They are of very light weight and easily carried by air currents for long distances. They find lodgment upon, or underneath, the chaff of healthy grains and remain there until the grain is sown. Under favorable conditions the spores germinate soon after germination of the grain itself. They produce a tiny transparent infection thread which soon penetrates the young tissues of the growing seedling and thereafter keeps pace with the upward growth of the stalk.

Produce Dark Spores.

By the time the plants arrive at maturity the original infection threads have grown so extensively that they enter the developing kernels and produce the characteristic large masses of dark spores. This simple life cycle of the smut fungus is completed but once during the growing season, and unless it is checked by means of effective seed treatment, may continue indefinitely in succeeding crops.—Extension Service, Colorado Agricultural College.

Top-Dressing Alfalfa Is Proper Thing for Spring

The practice of top-dressing alfalfa with manure during the winter is not recommended by the Ohio experiment station. It frequently results in injury to the stand and is not a sure preventive of winterkilling. Top dressing in the spring with a moderate application of acid phosphate is to be preferred.

If of very late cutting in the fall or other cause the stand is too thin in the spring for a good crop, a full harvest of hay may be secured by drilling in oats in March or early April with a disc drill, at the rate of three or four pecks per acre. The mixture of oats and alfalfa will make a hay of good quality.

If an early variety of oats, such as Fulghum, Sixty Day, Kherson, or Burt is sown, the mixture may be cut when the alfalfa is coming into bloom and will make a hay of good quality.

The second cutting will be almost pure alfalfa. A mixture of three pounds of timothy seed and two of alfalfa per acre may be seeded with the oats. This will gradually fill the spaces between the scattered alfalfa plants.

Breeding Cows and Sows Like Sweet Alfalfa Hay

The man who has some nice, sweet alfalfa hay stored away need not have much trouble with his breeding stock, if he will make liberal use of it. Cows fed on good legume hay will drop strong calves. Sows will farrow strong, vigorous litters if they are fed plenty of alfalfa and oats or barley, and sprangling of corn. Breeding cows or sows should not run with nor be fed with the fattening stock. Some breeders allow their sows to run with the general drove up to within two or three weeks of farrowing time. It's a mistake, and small litters with cross mothers are the outcome.

Alfalfa hay is a good conditioner, and it's a good bone builder; you can't find anything better, and the good, careful live stock feeder will see that his stock has plenty of it during the next two or three months.

Digging in Now to Help Digging Out in Summer

There are many things that a farmer can do just as well now as to wait till summer time is here. Putting the farm tools in shape is one of the first of these. Doing this work now gives us time to get repairs and to do the repairing as it should be done. Another is getting the manure out of the yards and into the fields. Draw it out as fast as it accumulates. Thus land the manure is of more value to the fields, keeps yards in better shape and next summer will be less of a fly nuisance about the premises. A third duty for the cold months is the getting of the fences in order. This will save much annoyance and waste of time by keeping the live stock in place.

Clean Straw Makes Best Litter for the Hencoop

Many times hens will get quite dirty when confined in the coops without much litter. If you wish to keep them in good plumage, have plenty of fresh straw where they can work in it and clean themselves. Many times the barn chaff which is used for litter is very dusty and dirty. If the birds get wet, or are out in the rain and then go in and work in the chaff, they will get their feathers soiled. There is nothing like clean, bright straw to clean up the feathers.

Good as Rat Eradicator

One of the most effective of all rat eradicators is a combination of equal parts of cornmeal and plaster of paris applied in spoonful amounts in the fields and ditches, about the farm buildings, and in and around the burrows themselves. It is superior to poison bait and the safest combination to use on the farm.

Diversified Farming Is Winning Friends

Find Stock Profitable Side Line in the West.

(Prepared by the United States Department of Agriculture.)

The effective farm trio—the cow, the hog, and the hen—have recently won many friends in a wheat-growing county of the West, Douglas county, Wash. This dry-land section had been planting wheat and buying most of its butter and eggs and using much canned milk and cream. For the last three or four years the county agricultural extension agent, leading farmers, and business men of the county have been endeavoring to bring about the gradual addition of enough live stock on the wheat farms to help feed the family and make a good contribution toward running expenses. Most of the Douglas county men have made the change in their farming systems by degrees, beginning with only a few animals, generally three or four cows, two brood sows, and about 50 chickens. As the growing of feed crops permits and skill in handling live stock develops, the flock and herds usually are built up to the amount of live stock the farm should carry.

How generally this diversified farming plan has been developed in the county is shown by the fact that instead of importing butter, eggs, and cream, as was the case three years ago, there was shipped out of the county during the year ending May 1, 1923, according to reports to the United States Department of Agriculture, a surplus of over 6,000 cases of eggs, 13,000 pounds of butter, and 46,000 gallons of cream. In addition, it is estimated that the amount of poultry and dairy products used in the county has more than doubled in the three years.

Plowing Up Barn Lots Is Beneficial to Animals

Hog raisers may accomplish two desirable results by plowing up the barn lots at least once a year. In the first place, hogs need good succulent pasture as much of the time as possible, and in the second place, they need protection against internal parasites, such as round worms, the eggs of which remain in the soil. Turning the soil in the lots helps to get rid of the pests and the crop of forage makes it a profitable operation, writes Jack L. Baker in the Indiana Farmer's Guide. In addition to providing cheap protein feed, pasture crops aid as a laxative and require the hogs to take a certain amount of exercise which is necessary to breeding animals and growing pigs.

Rye is probably the best crop to use for winter and spring pastures for hogs. By putting in successive plantings from two to four weeks apart it is possible to have fresh pasture all the time. Seeding for pasture should be much heavier than for grain crop; from three to four bushels per acre on a good soil is best. Pasturing can begin six weeks after seeding, and may be continued if the rye is not covered with snow, until the following April.

Cultivate Acquaintance With Trees in Woodlot

Cultivate an acquaintance with your trees. In nearly every planting of any age there is need for some thinning. Exercise your best judgment as to the most desirable trees to be left permanently, space them as uniformly as possible and remove the superfluous trees. Most towns have a large number of trees that should be removed in order that the remaining ones may be developed symmetrically true to the best type of their species. Remember that isolated trees must protect themselves and the branches must shade the trunk. Sun scald is nearly always followed by an attack of borers and many trees are lost by improper pruning. An attempt to grow trees with too small trunks is likely to be fatal to many of them.

The woodlot should be carefully inspected, leaving the trees that promise to be of the most value in coming years.

Composition of Kohl-rabi Very Much Like Mangels

Kohl-rabi is very much of the same composition as mangels, but the dry matter content is lower, and since the yield is generally less than that of mangels the cost of nutrients in kohl-rabi will be higher. The value of the dry matter will be almost equal to that of grain in the ration, pound for pound, but there is so much water that it is impossible to feed enough of kohl-rabi to replace grain. On the whole, kohl-rabi should occupy the same place in the ration that is occupied by mangels or other roots. Where there is a choice between growing kohl-rabi for stock or growing mangels, other things being equal, the mangels will make the most food.

It Is Necessary to Feed Sows Plenty of Protein

The greater the number of pigs raised per sow the less the cost per pig. The unborn pig is built largely of protein, hence the necessity of feeding plenty of protein to the sow from breeding to farrowing time in order that she may produce a large, strong, healthy, vigorous litter. The brood sow should have either one-half pound of tankage, one pound of linseed oil meal, one pound of soy beans or one gallon of skim milk or buttermilk per day to furnish the needed protein.

Control Cucumber Beetle

A dust composed of 20 parts sypsum, and one part calcium arsenate mixed thoroughly and applied to the plants as soon as they are up is considered the best means of keeping the cucumber beetle in check. During fair weather two applications of this dust should be made to the plant each week, while in rainy weather it is necessary to dust the plants after each rain. This has been found superior to the nicotine dusts widely in use.

Getting New Shoes in Holy Land

There are no modern shoe stores in Nazareth. When the traveler in the Holy Land needs new footwear, he must go to a native cobbler and have the shoes made to order. Mr. Blinchoff of the Near East Relief is pictured here having his measure taken by a Near East Relief orphan who is apprenticed to a cobbler.

Gold Mine Sold at an Auction for \$5,100

Baker, Ore.—The North Pole mine in the Bourne district, 40 miles south of here, one of the best known of the old gold producers in Baker county, went on the block at a sheriff's sale recently and when the hammer fell Sanford Adler and G. P. Lilly, two local young business men, were the purchasers of the property for \$5,100. The mine has actually produced between \$100,000 and \$400,000 of

gold and, according to mining engineers, "is just scratched on the surface."

Tennessee's Wealth

Washington.—Tennessee's wealth is placed at \$4,228,253,000 in a census bureau announcement giving its preliminary estimate as of December 31, 1922. That is an increase of 129.2 per cent over 1912. Per capita wealth is estimated at \$1,738, an increase of 113.3 per cent.

John W. McLain

How to Gain Strength and Endurance

Milwaukee, Wis.—"For the last twenty years I have used Dr. Pierce's Golden Medical Discovery at times, as a general tonic with excellent results. One bottle in the spring, and one in the fall, is usually sufficient. It gives me added strength and endurance and greatly aids me in following my strenuous occupation. I have also found Dr. Pierce's Pleasant Pellets very beneficial and mild in action."

"I have been thru Dr. Pierce's Invalids' Hotel and Surgical Institute at Buffalo, N. Y., and have found everything just as represented."—John W. McLain, 188 Wisconsin St.

Get the "Discovery" in tablets or liquid and you'll be surprised at the way you'll pick up.

Write Dr. Pierce's Invalids' Hotel in Buffalo, N. Y., for free confidential medical advice. Send 10 cents if you desire a trial pkg. of the tablets.

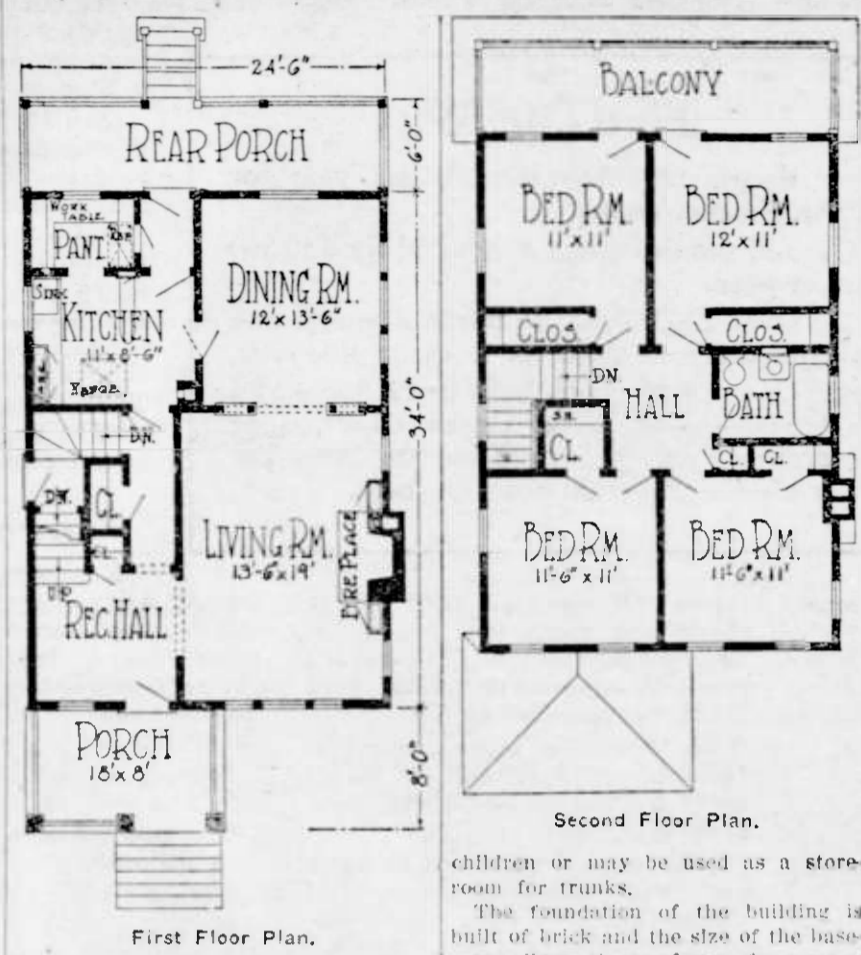

KEMP'S BALSAM

Don't cough! cough! cough!

W. N. U., MILWAUKEE, NO. 9-1924.

Exceptionally Large Home Designed for Small Lot

children or may be used as a store-room for trunks.

The foundation of the building is built of brick and the size of the basement allows plenty of room for a store-room or a cool, protected room for preserves and bottles. Adequate space is allowed for bins for coal and wood. As you will see from the photographs, a side door is provided accessible to either the basement or the first floor.

In style, this house is of the two-story, square, hip-roof pattern, having dormer windows to break the monotony of the roof, and is a style exceedingly popular in the suburbs of the big city or located in the small town.

Use Sugar Cane Fiber to Make New Wallboard

Out of sugar cane fiber is now being manufactured a new kind of so-called "insulating lumber." It is used as sheathing, and the manufacturers claim it is stronger than wood so used.

Besides sheathing, this product—which looks like wallboard—is used for stucco and plaster base, instead of lath, roof insulation, sound deadening, interior and exterior finish. As insulation "it has the value of cord."

It is further described as "a recent manufacturing process that molds direct to studs and rafters. Weather or rough usage does not readily harm it. The result is a strong, warm material in winter, cool in summer—and 25 per cent to 35 per cent of the fuel bill is saved." It comes in stock sizes, 7/8 of an inch thick, and 4 feet wide. There are various lengths from 8 to 12 feet. It weighs about sixty pounds per 100 square feet.

Choice of Contractor

Too much care cannot be taken in the selection of a contractor to build your home. The fact that he has constructed many homes is not necessarily a favorable recommendation. Good will and consequent recommendations of satisfied customers is a builder's best asset, and to that end it is well to examine some of the buildings which he has built, preferably homes which have been constructed for over two or three years, as this length of time will show up faulty construction.

Heavy Pressure

A British scientist experimenting with a stream-line filter along which liquids passed under pressure through thousands of tightly packed, perforated paper sheets, took the color out of red wine and tea and milk, leaving instead of the last named a tasteless fluid, like water.

New Building Material Made of Waste Paper

A new building material made from waste paper and designed for ceilings and wall linings has been perfected by a Swedish engineer, and production on a large scale soon will be undertaken.

The raw materials are ordinary waste paper such as accumulates in cities, clay, and sulphate lye, the cheapness of which warrants an inexpensive finished product.

The covering is said to be fireproof and durable; can be applied by unskilled labor, will take paper, paint or stain, and can even be polished. It is a good non-conductor, and does not respond to the changes in temperature.

Waterproofed Stucco Is Durable Material

The home built of permanently waterproofed stucco leaves little to be desired. It is durable and offers beauty and variety in its finishes, tones and color schemes, is lasting in body,

100,000 PEOPLE PRAISE TANLAC FOR ITS MERIT

World's Greatest Tonic Is Endorsed by People Grateful for the Relief It Has Given Them.

Actuated by a deep sense of gratitude and desire to help their suffering neighbors, more than 100,000 well-known men and women have offered their personal experience as proof of the wonderful health-giving powers of TANLAC, the World's Greatest Tonic.

Throughout each and every one of this long list of testimonials rings the spirit of earnest sincerity which characterizes the following excerpts:

Mrs. D. J. Pritchard, Cleveland, Ohio: "People wanting to know what TANLAC will do may communicate with me. It increased my weight 32 lbs. and brought me the very help I longed for."

J. H. Taylor, Memphis, Tenn.: "To me TANLAC was just like a good friend—gave me help when I needed help most."

Mrs. Mary Schumaker, Racine, Wis.: "Every year at the change of seasons a course of TANLAC makes me eat with a relish, restores my strength and leaves me in splendid health."

Judge George P. Wiggins, Police Magistrate, Belleville, Ill.: "That I am enjoying such fine health now I can attribute only to the help I received from TANLAC."

Mrs. C. K. Sellers, Springfield, Mo.: "Since taking TANLAC I enjoy the blessing of perfect health and have the complexion of a schoolgirl."

V. E. Ferry, age 78, Seattle, Wash.: "TANLAC built my weight up 21 lbs., rid me of fifteen years' stomach trouble, and left me feeling many years younger."

TANLAC IS FOR SALE BY ALL GOOD DRUGGISTS. ACCEPT NO SUBSTITUTE OVER 40 MILLION BOTTLES SOLD.

A Poor Entertainer

75% of disease avoided through internal cleanliness

WHY run the risk of sickness? Keep clean internally. When you are constipated, poisons form in the accumulated food waste. These poisons, absorbed by the blood, attack all parts of the body. The first results, headache, biliousness, a feeling of "heaviness," etc., serve as warnings of a graver danger. If this intestinal poisoning continues unchecked, you become the victim of some serious organic disease.

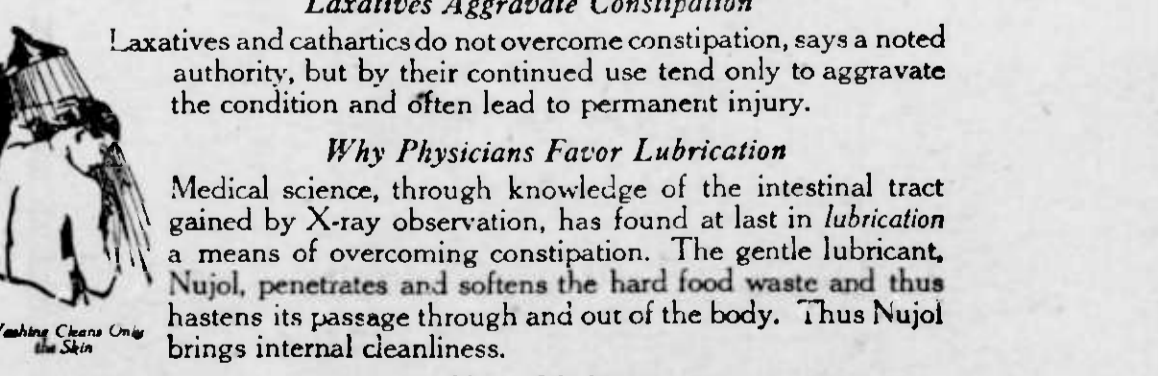

This is why intestinal specialists state that constipation is the primary cause of three-quarters of all illness, including the gravest diseases of life.

Laxatives Aggravate Constipation
Laxatives and cathartics do not overcome constipation, says a noted authority, but by their continued use tend only to aggravate the condition and often lead to permanent injury.

Why Physicians Favor Lubrication
Medical science, through knowledge of the intestinal tract gained by X-ray observation, has found at last in lubrication a means of overcoming constipation. The gentle lubricant, Nujol, penetrates and softens the hard food waste and thus hastens its passage through and out of the body. Thus Nujol brings internal cleanliness.

Not a Medicine
Nujol is used in leading hospitals and is prescribed by physicians throughout the world. Nujol is not a medicine or laxative and cannot grip. Like pure water it is harmless. Get rid of constipation and avoid disease by adopting the habit of internal cleanliness. Take Nujol as regularly as you brush your teeth or wash your face. For sale by all druggists.

Mr. and Mrs. John A. Gudex of West Elmore, Mr. and Mrs. Sam Gudex of East Town Line, Mr. and Mrs. C. F. Kranke of North Osceola spent Tuesday evening at the Geo. Gudex home.

A Business Story

Rich in meaning to every motor car buyer

How Studebaker reached the heights

THE story of Studebaker has been told by many men in many ways. Now let us tell it to you.

Studebaker growth has in late years been Motordom's sensation. Sales have mounted until last year 145,167 buyers of quality cars selected Studebakers. They paid \$201,000,000 for them.

All must realize that a new situation has arisen in high-grade cars. You who are interested should now analyze the reasons.

72-year traditions

The Studebaker principles have become traditions in their 72 years of existence. They have never wavered. In all changing conditions they have brought new luster to that name.

Men come and go, but a name like this becomes a heritage to foster and enhance. That's what we've done — we who have that name in keeping for a time.

Studebaker has always been a leader. For two generations it led in horse-drawn vehicles, now products of the past.

Most of you remember Studebaker carriages — queens of their time. They were used by multitudes of people who loved quality and style.

When motor cars succeeded them, Studebaker became the logical leader in that field. Any other place would have been an anomaly.

The only way to the top

A concern of this age has one fact ingrafted in its fiber. The only way to leadership is through super-service.

The leader must excel in all you seek — in quality, in beauty and in value. There is no other way to the top. Every stretch of the road is strewn with wrecks of those who tried another.

What others say — not what you say — determines your place in the long run. In every field of endeavor one must accept that fact.

We had the money, the plants, the prestige. We had the incentive of Studebaker traditions. In time we secured the men.

We told those men to build for us the utmost in fine motor cars, regardless of all costs. We pledged them our good faith and our resources.

The cost was \$50,000,000

We built new factories — modern plants. We fitted them with new equipment — 12,500 up-to-date machines. Of the \$50,000,000 in our plants and equipment, \$32,000,000 has been invested in the past five years. So it represents the last word in efficient manufacture.

We established a Department of Methods and Standards, to fix for every Studebaker detail the maximum of quality.

We created a Bureau of Research and Experiment, employing 125 skilled men. They make 500,000 tests per year to maintain our supremacy.

They fixed countless standards, including 35 separate formulas for steels. Then on the most important steels we offered makers a bonus of 15% to conform to those standards exactly.

We invested \$8,000,000 in a drop forge plant to make all our own drop forgings. \$10,000,000 in body plants, to build all bodies to our standards.

We employed 1,200 skilled inspectors to see that all standards were fulfilled. There are 30,000 inspections on Studebaker cars during manufacture, before they go out from the factory.

That's the whole story

That's about the whole story. We simply followed the never-changing Studebaker principles. We gave to our buyers the utmost — values they could not match. Then they turned by tens of thousands to Studebaker cars.

Over 750,000 of those cars have gone out. Their performance has developed a demand for 150,000 per year.

Every increase in sales brought a lowered cost, which we promptly gave our buyers. Today these fine cars are offering values which no rival can approach. They have made us the world's largest builders of quality cars.

We deserve a hearing

Now we deserve a hearing. All who consider a car at \$1,000 or over should learn what Studebaker offers. That in fairness to yourself and us. Check one by one the advantages we offer. You'll find them by the score.

Remember that 145,167 who did that last year chose a Studebaker car. There are nine chances in ten that you'll do it.

Consider our record, our accomplishments, our policies and principles. Consider that we have \$90,000,000 at stake on satisfying men like you. Don't buy a car in this high-grade class without seeing what we give.

Find Out Why

People paid \$201,000,000 last year for Studebaker cars.

The result is now a demand for 150,000 per year.

Over \$50,000,000 in modern plants and equipment to build the finest of fine cars.

One of these cars, built in 1918, has run 475,000 miles. That means 80 years of ordinary service. In December this car made the trip from coast to coast.
