

# OLIVER OCTOBER

By George Barr McCutcheon

## OLD OLIVER

**SYNOPSIS**—Oliver October Baxter, Jr., was born on a vile October day. His parents were prominent in the commercial, social and spiritual life of the town of Rumley. The night that Oliver October was born a gypsy queen tells his father's fortune and tells him that he will be a great man. His father adds that his son will never reach the age of thirty, that he will be hanged for a crime of which he is not guilty. Ten years later Mrs. Baxter died when Oliver was near his majority. Josephine Sage, wife of the minister, caused a sensation when she goes on the stage. Her daughter Jane and young Oliver become greatly attached to each other. After finishing college, young Oliver accepts a position in Chicago with an engineering company. He goes to Chicago. Upon his return he enlists in the Canadian army.

## CHAPTER III

### Hume From the War

The war was over. Oliver October Baxter came through without a scratch. In April, 1919, he sailed from Brest and on the tenth of May arrived in Rumley, discharged from the army, jobless. On the way home he stopped over in Chicago to notify his employers that he would be ready to resume work after a month's much-needed rest. He was blandly informed that as soon as anything turned up they would be pleased and happy to take him back into the concern, but at present there wasn't a vacancy in sight.

Being a captain in the army and used to plain speaking, he told the astonished general manager what he thought of him and the whole works besides, and airily went his way.

This time there was no delegation at the station to meet him. His father and Sammy Farr were waiting for him when the train pulled in.

Old Oliver eyed his son narrowly. "What's this I hear about not taking you back on your old job?" he demanded. He extended his hand, which young Oliver gripped in both of his.

"Aren't you glad to see me back, alive and well, dad?" he cried. "Of course, I'm glad you're back, son—of course, I am. I've been praying for this ever since you went away. But, didn't I say you were a fool for giving up a \$7,000 job to go over and mix up in a war that wasn't any of our business?"

"Oh, I'm not down and out, you know, dad," broke in young Oliver. "So, cheer up! I'm not worrying."

"Course you're not worrying," was his father's sour retort. "You've got me to fall back on, with a good home and grub and a darned fine business to drop into when I'm dead and gone."

His son could hardly believe his ears. He was bewildered, hurt.

Sammy gave Oliver a significant look.

As the two young men hurried across the platform with the bags and bundles, he found opportunity to say to the new arrival:

"Your father will be in a good humor in a minute or two. It's just a habit he's fallen into since you've been away. I guess it's that infernal gypsy business. He's as peevish as blazes a good part of the time."

They drove off in Sammy's car while Oliver piled his old friend with questions.

"Where is Jane?" he asked suddenly.

"Jane Sage? Oh, she's around some as ever. This is a lot easier for Mr. Sage now. I guess maybe you haven't heard about his mother doing out in California and leaving him quite a bit of money. It looks like a pretty serious affair between her and Doc Lansing."

"What's that?" demanded Oliver, startled.

"I guess it's all happened since you went away. Doc's only been practicing here since last summer. Fine fellow."

"I don't seem to remember him," said Oliver, dubiously. "You say she's—in love with him?"

"Looks that way," said Sammy, indifferently. "He's dead gone on her, that's sure."

Presently Mr. Baxter cackled. He was in high good humor again.

"Septa Grimes just can't wait to see you," he declared. "You know she's keeping house for me now."

"Aunt Septa keeping house for you?"

"Yes. I thought that people would be sure to talk if she came over and lived at my house. But the cursed part of it is, nobody thinks there's anything scandalous about it. There hasn't been a darned bit of talk. What the dickens are you laughing at, Sam?"

"I just ran over a hen," lied Sam promptly.

Jane was well along before Oliver began seriously to contemplate bringing his self-styled "vacation" to an end. He had been glorious. Even the minister's stiches of Death swamp across which he leaped from the oak-shaded estate that he would always call home, were not so repelling as they had been in days of yore. The world was beautiful.

During the first week he spent many happy, care-free hours with Jane Sage. One evening, lounging on her porch, he asked her suddenly:

"What sort of a chap is Doc Lansing, Jane?"

She started, and for a moment her eyes were fixed intently on his half-averted face. There was an odd, startled expression in them.

"He is very nice," she answered, and they both fell silent.

An automobile approached along the front street, coming to a stop at the front gate.

"Hallo," exclaimed Oliver. "Here comes the gentleman himself."

"Good evening, Jane," said young Lansing as he came up to the steps.

WNU Service Copyright, Bell Syndicate

"How are you, Captain Baxter? Wonderful night, isn't it?"

"Wonderful," said Oliver, who wasn't thinking at all of the physical aspects of the night.

Twenty minutes later he looked at his wrist-watch, uttered an exclamation, and sprang to his feet.

"I must be going, Jane," he said. He took himself off in well-simulated haste.

As he strode off down the street he was conscious of an extremely uncomfortable feeling that they were glad to be rid of him. A queer little chill of dismay struck in upon him. For a moment he felt utterly desolate and bewildered. He felt lost. Why, it meant that he and Jane couldn't be playmates or chums any longer.

Four days later Jane met him face to face in the street, and looking straight into his eyes, asked:

"What is the matter, Oliver? What have I done?"

"Done?"

"Don't be stupid. Have I offended you? Why haven't you been up to see me?"

"Exactly."

"If I really believed that to be the case, Uncle Herbert, I—I would stay."

Jane, who had been silent during the brief colloquy between her father and Oliver, was studying the young man's face intently. She was puzzled by his manner and by his expression.

"I came over by the back road, along the swamp," he explained, catching her in the act of staring at his muddy shoes. "Father walked part of the way with me. Gee, what a panning he gave me! I was terrible, Mr. Sage. I saw red. I—I had to run—I couldn't stand it. G—d, how miserable I am!"

Jane and her father listened, speechless, and presently Mr. Sage arose and went into the house.

The clock on the town hall struck 12 before Oliver reluctantly bade Jane good-night and started homeward. On his way home, through the heart of town, he passed the rather pretentious house in which the Lansings lived.

There were people on the broad veranda. He looked for the companionship of friends—quarry friends. He turned in at the stone gate and walked swiftly up to the house.

"Hello, Ollie," called out Sammy Farr.

Young Lansing came to the top of the steps to greet him.

"I've been up saying good-by to Mr. Sage and Jane. And the funny part of it is that I may not go away tomorrow after all," said Oliver. "The Sages think I ought not to leave my father."

"I quite agree with them," said the other stiffly.

"Have a highball, Baxter?" called Sammy.

"Not tonight, thanks. I've got to be running along. Father may be waiting for me. Night, everybody."

And he was off. The group watched him stride swiftly down the cement walk. Sammy was the first to speak.

"Well, I call that sociability, don't you? What the dickens is the matter with him? First time I've ever seen Ollie Baxter with a grouch."

Early the next morning, Septa Grimes called Joseph Sikes on the telephone.

"Did Oliver Baxter stay all night with you?" she inquired. "I mean old Oliver?"

"No."

"Have you seen anything of him this morning?"

"No. What's the matter, Septa?"

"Well, he didn't sleep here last night, and there ain't a sign of him around the place. I—I guess maybe you'd better come up, Joe."

The long and the short of it was, Oliver Baxter had vanished as completely as if swallowed by the earth—and it was the general opinion that that was exactly what happened to him. There was not the slightest doubt in the minds of his horrified friends that he had wandered out upon the swamp and had met a ghastly fate in one of the countless pits of mire whose depths no man knew or cared to fathom even in speculation.

Notwithstanding the almost universal belief that poor old Oliver Baxter was buried in the black mire of the swamp a star-wide search was at once instituted by his distracted son, who, for one, did not believe that the missing man had gone to his death in the louthsome tract.

The bank's prompt announcement that Mr. Baxter had withdrawn thirty-five hundred dollars convinced Oliver October and a few sound-headed individuals that he had deliberately planned his departure from Rumley.

This process merely consists of burning the filament by passing a current through it, but with the B battery totally disconnected. Why should the B battery be disconnected during the reactivating measures? Well, this is necessary because with the B battery connected, the positive high voltage charge on the plate would cause the material to become

increase in the filament current will not and should not increase the signal strength.

If it is necessary to cut out all the resistance to obtain the loudest signals, either the filament battery is discharged or one or more of the tubes are defective.

**Save the Tubes**

Never use more tubes than are sufficient for the results desired. It frequently happens that inexperienced operators will have more tubes burning than are necessary, and then detune to lessen the volume of sound. For local stations, for instance, the first audio stage is usually sufficient.—Cincinnati Enquirer.

**Remove Battery Caps**

When charging a storage battery always open the vent caps so that the gas can escape. The temperature of the battery will go entirely too high if the vent caps are not removed and the battery may become damaged beyond repairs.

**Defective Tube Will Make Radio Set Howl**

At times the five-tube radio receiver will howl with an intense note, irrespective of whether the receiver is tuned to a particular station or not. The howl is due to a defective tube in the audio frequency portion of the receiver. It can be remedied by substituting a new tube or by interchanging the tubes among themselves. Generally the tube will be found faulty with this trouble.

One of the chief causes for tubes becoming inoperative after use for some time is the excessive filament current to which they are sometimes subjected. Rheostats are put into the receiver to regulate the filament current of the vacuum tubes and should be adjusted so that the maximum signal is obtained with a minimum amount of filament current. It is a well-established fact that when the XL filament tube, such as the UV and C type, is adjusted to a certain filament current, the maximum signal strength is obtained. Any further in-

crease in the filament current will not and should not increase the signal strength.

If it is necessary to cut out all the resistance to obtain the loudest signals, either the filament battery is discharged or one or more of the tubes are defective.

**Save the Tubes**

Generally the tube will be found faulty with this trouble.

One of the chief causes for tubes becoming inoperative after use for some time is the excessive filament current to which they are sometimes subjected. Rheostats are put into the receiver to regulate the filament current of the vacuum tubes and should be adjusted so that the maximum signal is obtained with a minimum amount of filament current. It is a well-established fact that when the XL filament tube, such as the UV and C type, is adjusted to a certain filament current, the maximum signal strength is obtained. Any further in-

came when Oliver, looking at his watch, announced that he must be running along, as he was due over at the Sages to say good-by to Jane and her father.

"Well, I'll walk part of the way with you," said his father, crossly. "I'd like to see if I can't coax you to change your mind about coming into the store. If you don't mind, we'll take the lower road along the swamp. It's a short cut for you—saves you a quarter of a mile or more."

A few minutes before 9 o'clock Oliver October appeared at the home of Rev. Mr. Sage, somewhat out of breath and visibly agitated.

"I'm awfully sorry to be so late," he apologized. "Father and I had a long and trying confab and I—I couldn't get away. God knows I hate to say it, but I'm glad I'm going tomorrow."

"No, you shouldn't say it, Oliver," said Mr. Sage. "Poor man, he is really not responsible these days. You see, Oliver, for nearly 30 years he has lived in dread of—well, of the absurd-thing that gypsy woman said."

"And that is why he wants me to stay here, so that he can watch over and protect me?"

"Exactly."

"If I really believed that to be the case, Uncle Herbert, I—I would stay."

Jane, who had been silent during the brief colloquy between her father and Oliver, was studying the young man's face intently. She was puzzled by his manner and by his expression.

"I came over by the back road, along the swamp," he explained, catching her in the act of staring at his muddy shoes. "Father walked part of the way with me. Gee, what a panning he gave me! I was terrible, Mr. Sage. I saw red. I—I had to run—I couldn't stand it. G—d, how miserable I am!"

Jane and her father listened, speechless, and presently Mr. Sage arose and went into the house.

The clock on the town hall struck 12 before Oliver reluctantly bade Jane good-night and started homeward. On his way home, through the heart of town, he passed the rather pretentious house in which the Lansings lived.

There were people on the broad veranda. He looked for the companionship of friends—quarry friends. He turned in at the stone gate and walked swiftly up to the house.

"Hello, Ollie," called out Sammy Farr.

Young Lansing came to the top of the steps to greet him.

"I've been up saying good-by to Mr. Sage and Jane. And the funny part of it is that I may not go away tomorrow after all," said Oliver. "The Sages think I ought not to leave my father."

"I quite agree with them," said the other stiffly.

"Have a highball, Baxter?" called Sammy.

"Not tonight, thanks. I've got to be running along. Father may be waiting for me. Night, everybody."

And he was off. The group watched him stride swiftly down the cement walk. Sammy was the first to speak.

"Well, I call that sociability, don't you? What the dickens is the matter with him? First time I've ever seen Ollie Baxter with a grouch."

Early the next morning, Septa Grimes called Joseph Sikes on the telephone.

"Did Oliver Baxter stay all night with you?" she inquired. "I mean old Oliver?"

"No."

"Have you seen anything of him this morning?"

"No. What's the matter, Septa?"

"Well, he didn't sleep here last night, and there ain't a sign of him around the place. I—I guess maybe you'd better come up, Joe."

The long and the short of it was, Oliver Baxter had vanished as completely as if swallowed by the earth—and it was the general opinion that that was exactly what happened to him. There was not the slightest doubt in the minds of his horrified friends that he had wandered out upon the swamp and had met a ghastly fate in one of the countless pits of mire whose depths no man knew or cared to fathom even in speculation.

# RADIO

Diagram Showing UV201A Tube Connected for the Purpose of "Flashing" the Filament.

By ARTHUR F. MORASH, S. B., in Boston Herald.

Many radio fans have, no doubt, heard about some sort of a process by which inactive tubes may be restored to their former activity, but according to the many questions concerning it, there has been evidently a shroud of mystery cast over the process.

Some know from observation, and many others know through sad experience, that the vacuum tube contains a filament that becomes luminous when a current passes through it. This filament receives its current from the A battery. Contrary to the popular belief, the filament is not put in the tube for illumination purposes, but to serve as a source of the electrons necessary in the "mechanism" of the vacuum tube. A more technical term for the filament is "hot cathode," and simply means that it becomes a source of negatively charged particles known as electrons when it reaches the proper temperature. This temperature is obtained by passing a current through the filament.

For this reason it would perhaps be more to the point to call this current the "heating" instead of the more common expression, "filament" current.

**Treating Filaments.**

The first filaments were of pure tungsten, carbon, platinum, etc., but it was soon discovered that the number of electrons emitted by the hot cathode, or filament, could be enormously increased by coating the surface of the filament with certain chemical compounds. The compounds that proved to be the most active in this respect are the alkaline earth oxides, such as barium, calcium, strontium, etc.

However, a still more active material was discovered in recent years, and is known as "thorium oxide." It may be of interest to know that it is the titanium series of chemical elements, and is used in the formation of incandescent gas mantles. Another very interesting fact is that it is radio-active.

Because of the compounds, two general types of filaments have come into prominence, they being the oxidized filaments and the thoriated filament. The WD11 and 12 are examples of the former, while the UV199 and UV201A tubes are in the latter class. As the oxide-coated filament cannot be rejuvenated, I will not discuss it any further in this article, but will focus my entire attention on the thoriated type filament.

This type of filament consists of a tungsten core that has been treated with thorium oxide, not merely coated with the compound, but actually impregnated, so that the amount of active material on the surface of the filament is comparatively small in comparison with the total amount. It is because of this feature that a tube employing a filament of this variety seldom goes out of service because of a burned-out filament, but because the emission has dropped below the necessary value. When this condition has been reached the tube is said to be inactive. The real significance of this expression is that most of the active material has been evaporated from the surface of the filament, and as a consequence the number of electrons emitted is reduced to a very low value.

**How to "Flash" a Tube.**

This process merely consists of burning the filament by passing a current through it, but with the B battery totally disconnected. Why should the B battery be disconnected during the reactivating measures? Well, this is necessary because with the B battery connected, the positive high voltage charge on the plate would cause the material to become

exhausted as fast as it came to the surface, which is at best a very slow rate, hence it is necessary that we remove the cause of the exhaustion.

In the accompanying diagram, I have shown a UV201A tube connected for the purpose of "flashing" the filament. The only connections necessary are the two leads from the filament posts of the socket connected in series with a rheostat and a 6-volt battery. As to the time required for flashing, I suggest that those who try this process to impress the full six volts across the filament for about one minute, and then by means of the rheostat reduce the voltage until the filament burns at normal brilliancy. Then allow the filament to burn for a period of 12 hours or more. If the tube is still found to be inactive after this treatment, it may be "flushed" for a second or so by connecting a 22½-volt B battery to its filament terminals and then "cooked" for a longer period at normal brilliancy.

The same reactivating process may be applied to the UV199 tube or any others having a thoriated type of filament.

**To Prevent Leakage of Audio, Radio Currents**

By-pass condensers are now used largely in the more efficient types of receivers. Their work is to prevent the leakage of the audio and radio-frequency currents into parts of the circuit where they would cause trouble, or in other words, to confine these frequencies to their proper place in the circuit.

Usually the by-pass condensers are placed across the positive B and the negative filaments. These condensers must not only be able to stand a short-circuit test, but must stand a leakage test also. If one of the by-pass condensers is leaking, it will allow B battery current to flow through the circuit all the time, and will not only drain the B battery very rapidly, but will also ruin the tubes.

To make a leakage test, first connect up two 45-volt B batteries, so

that you have 90 volts; now connect a piece of flexible wire to the negative and another piece of wire to the 90-volt terminal. Hold the ends of these wires across the condenser connections for a few seconds. This will charge the condensers. Now lay the condensers aside for about 15 minutes, then take the voltmeter and connect a piece of wire to the positive and another piece of wire to the negative connection on the voltmeter; then touch the ends of these wires to the condenser connections. If the hand of the voltmeter moves, the condenser is O. K., for it shows that it held the charge you gave it from the 90-volt battery. If, however, the hand on the voltmeter shows no movement at all then the condenser is leaking and should not be used as a by-pass condenser.—Philadelphia Record.

## Watch Incubator During Hatching

### Supply of Heat, Moisture and Ventilation Is of Much Importance.

Incubators are in use during winter on many farms and in commercial hatcheries from which young chicks are supplied to the trade. To be successful with the hatch, the incubator must be carefully looked after.

A fertile egg with a strong germ will hatch into a strong, vigorous chick if care is taken in supplying the proper heat, plenty of moisture, sufficient ventilation, and the egg is turned. A chick hatches normally in 21 days but the amount of heat determines this time and if the eggs are kept too hot, the chicks may hatch in 19 or 20 days.

**Heat in Incubator.**

According to A. G. Oliver, poultry extension specialist at the North Carolina State college, the heat occurs in the incubator in layers and for best results should be 103 degrees on top of the eggs, 100 degrees at the middle of the eggs and 97 at the bottom. During cold weather the heat zones are narrower and where air is forced through the machine, the heat is properly distributed.

Mr. Oliver states that moisture in the incubator is next in importance, to heat. Too much moisture prevents evaporation and causes the chick to become strangled with liquid in its attempt to breathe. Too little moisture causes such quick evaporation that the air cell is so large the chick cannot break the shell to get out. It reduces the amount of food in the egg and results in a small, undersized chick being hatched.

**Benefit of Ventilation.**

Ventilation brings to the egg oxygen and takes away the poisonous carbon dioxide gas. The chick is a factory, says Mr. Oliver, using the oxygen and egg material to build a body and expelling the gas. Thus it is important to ventilate the incubator as far as to adjust this process to correct proportions. By carefully turning the eggs, all of these things are equalized in the egg and the embryo is given exercise.

# ORIOLE

Model 7-5 Tube Radio

The reason for the startling performance of the Oriole Receiver may now be told. The new "Trium" Circuit has been patented by the W. K. Electric Co. This circuit gives the important results noted below:

1. TUBE OSCILLATION--No "lossers" are used to keep the tubes from oscillating. Tubes naturally do not oscillate in this circuit. This fact makes the Oriole highly selective.
2. SELECTIVITY--Because of the new, unusual and patented features of this circuit, strong signals cannot be transferred from tube to tube, as in ordinary circuits. This makes the Oriole the sharpest tuning receiver yet invented.
3. NO TUBE NOISES--Complete elimination of tube noises is effected by using a zero voltage in the primaries of the radio frequency transformers. Oriole has exceptional volume and sweetness of tone. Its selectivity is unparalleled.

## MUSIC SALESMAN WANTED

to be our local agent and sell world's leading grand, player and reproducing pianos, radio, phonograph, saxophone, etc.--everything musical. A liberal contract will put you in business for yourself without capital. Special plans to help you close big sales. Write for proposition, P. O. Box No. 623, Milwaukee, Wis.

## DON'T GET UP NIGHTS

John Lumpkins, Dayton, Ohio, says: "Come to 7 Carrie St., and I will show you 25 pieces of gravel that passed after taking Lithiated Buchu (Keller Formula). Had to get up 15 times at night for two years. Alright Now." Lithiated Buchu cleanses the bladder like Epsom Salts do the bowels, thereby relieving irritation, driving out foreign matter and neutralizing excessive acids. These are the causes of unnatural action of the bladder at night. Lithiated Buchu (Keller Formula) is not a cheap medicine. The tablets cost 2 cents each. Sold at leading drug stores or Keller Laboratory, Mechanicsburg Ohio. Locally by Edw. C. Miller.

## Valparaiso, First Lutheran University, Has Unique History

About forty miles southeast of Chicago, just beyond the great manufacturing district of Gary, there lies a beautiful city of about ten thousand people called Valparaiso, Ind. This little city has become famous throughout the entire United States and also in practically every foreign country for its university.

Fifty-one years ago, Dr. H. M. Brown opened in this city a school of higher learning with an enrollment of some thirty students, and called it Valparaiso University. It has become a distinctive school and was described in short as "the poor man's Harvard." Dr. Brown offered in his school an opportunity for higher education especially to such men and women, both young and old, as had not received a standard elementary education nor a standard high school training, and were besides in such poor circumstances that they could not finance their education at state and other private universities.

Students began to come in ever-increasing numbers. In 1920 the total enrollment reached more than four thousand. In the fifty-one years of its existence, this school has had over one hundred thousand men and women in attendance, and among the graduates are such men as Governor Len Small of Illinois, Senator Deneen of Illinois, Governor Blaine of Wisconsin, Senator Norris of Nebraska, Senator Jones of New Mexico, and the late Senator Kaitson of Indiana.

With the death of Dr. Brown, which occurred several years ago, the institution received a fatal blow for no one could be found who possessed Dr. Brown's genius in executive ability and for the proper financing of so large an institution. And so the school began to lose ground and from year to year more rapidly until the end of the summer term of 1925 found it at the verge of death. Great efforts were made by the people in charge of the affairs of the institution to find an organization to come to the rescue. Among others, the Lutheran people were approached. After a thorough investigation by competent men, it was decided to accept the offer made to purchase the institution, representing a replacement value of a million and a quarter, for \$200,000, or about twenty cents on the dollar.

## U. S. Timber Supply.

Under the present conditions the timber supply of this country will be exhausted in between forty and fifty years, according to the chief forester of the Department of Agriculture. The timber is being cut and used half times as fast as it is being replaced, while the method of logging cut three and one-half times as fast.

## Mah Jongg 3,000 Years Old.

The Chinese game, Mah Jongg, which has taken America by storm, and which is being played in London, Paris and other world centers, was invented three years ago by a Chinese merchant, who visited away the time during stages playing the game with his companions.

## The Juggernaut.

"Juggernaut" is one of the principal features of India. This god was taken out in procession periodically, and many of the faithful prostrated themselves before his car, which was of great weight, and were crushed. This practice was abolished by the British government.

## Anticipating the Worst.

A California boy dislocated his neck while vigorously washing it. If he dislocated his neck while washing it himself, what would have happened to him if he had let his mother carry out her threat to wash it right?

## BATAVIA

Mr. and Mrs. John Emley spent Friday at Boltonville.

T. Lefever spent the holidays with his sister at Milwaukee.

**Virtue in Square Deal**  
Slipping things over on the other fellow yields but temporary satisfaction. Smartness of this kind always carries with it a feeling that you have invited treatment of the same sort. Only from giving the square deal comes genuine and lasting satisfaction.

**A Society, 1,000 Years Old.**  
At Creil, near Paris, there is a society of archers, with an annual competition for the original trophy given at the first meet of the society, more than a thousand years ago.

**Scotch Sheep for Peru**  
When Peru recently bought 150 pure bred sheep from Scotland to improve local strains the sheep were accompanied by a Scottish shepherd and five thousand Scotch ewes.

**Likeness Was Perfect**  
An Illinois man, who has been painting for 40 years, has painted a portrait of a man, who was killed in a crash, and it was so perfect that the man's family, who naturally had a dislike for the man, at first thinking it was a ghost.

**Odd Pronunciation**  
Says an experienced "Ngon," a West African fruit, may be imported into this country. It is pronounced "pe-tah-ble."

**Primroses**  
Primroses thrive best in a cool temperature and require frequent watering. If the temperature drops to 45 no harm will be done. They will bloom in a window almost the year round. This plant, with its thread-like roots, delights in a soil that contains three parts sand, one part leaf mold and one part peat moss, to which sand and a small quantity of well-decayed stable manure has been added. - Flower Magazine.

Kewaskum, Wisconsin

## Crow an Ideal Thief

The crow is an ideal thief. It never bungles its job. Naturalists say that it can carry away the egg of another bird without spilling a drop of the contents. To do this it accomplishes another difficult feat, that of driving its bill partially through the egg without breaking the shell on the other side.

## Names Made Historic

The ward marauder commemorates John London Macadam, who died in 1860 after doing great work as a road improver in the British Isles. The electrical term volt comes from Volta, the discoverer of voltaic electricity; while the common word mockintosh shows how another Scot than Macadam contributed to our comfort by producing a rain-proof coat.

## Polka Revival Attempted

Farmers in the Maryland district of England have attempted to revive the polka and other old-time dances much to the joy of the younger generation, who seemed willing to drop the modern steps somewhat upon being taught the polka and the favors by the older dancers. William Smith inaugurated the novelty at a dancing hall, with the aid of the more mature residents of the community.

## Candy Temptation

A Cleveland (Ohio) student now knows his fondness for a sweet tooth. He had a couple of live frogs in a securely closed, slightly perforated candy box, which he intended to take to the biology laboratory but forgot. When he returned for the frogs he found the box open and his landlady half under the bed trying to capture them.--New York World

### McCORMICK-DEERING

A Name that Means Much on Farm Engines and Feed Grinders!

McCormick-Deering Engines and Grinders work together in perfect harmony—the harmony of equal merit. McCormick-Deering Engines have long been leaders in their field. The same is true of McCormick-Deering Grinders. We have a complete stock of both machines and can furnish you either or both in sizes and styles perfectly suited to your special power and feed requirements. Many of our customers have already proved to their own satisfaction the wisdom of grinding their grain for feed; and they are finding many other uses for their sturdy McCormick-Deering Engines too. You'll find this combination of two excellent machines a winner—a most valuable investment. May we demonstrate these two machines to you soon?

#### Have Yearning Dreams

Are dreams really any way to enjoy things we want but cannot have in reality? No, the great analysis can tend—and the dream of anyone can support this contention. For anyone, like other people, dream when they sleep but their dreams have a striking similarity. Visions of another future come, and a particular that the parents have come to take them home constitute a plan dreams the Kansas City business.

#### Copper Coins in China.

There are now about 40,000,000,000 copper coins in circulation in China—so many that it is no longer profitable to make them.

#### Or Supper-time.

Teacher (explaining meaning of past, present and future)—"Now if I say, 'I am eating' what time is it?" Young Asks—"Supper-time."

WISCONSIN HAPPENINGS

The Kitchen Cabinet

My business is not to remake myself, but to make the absolute best of what God has made—Browning.

THE WHOLESOME APPLE

A dish of well-seasoned apple sauce prepared from good flavored apples, a little sugar and butter added while hot, makes a sauce which is hard to equal.

Apple Pudding.—This is a bird's nest pudding of our grandmother's day: Fill a deep dish with sliced apple, sweeten to taste. Dust with nutmeg and spread over them a batter prepared with one-half cupful of sugar, one tablespoonful of butter, one egg, three-fourths of a cupful of milk, one and one-half cupfuls of flour, one teaspoonful of baking powder and one-half teaspoonful of salt.

Apple Punch.—Cut six tart apples into quarters; core but do not peel. Put into a preserving kettle, add one cupful of raisins, two bay leaves, a small stick of cinnamon, the grated rind of three lemons and two quarts of cold water; let come to a boil, add two more quarts of water (cold), cover and let boil for thirty minutes. Drain through a muslin bag. When cold add the juice of three lemons and two pounds of sugar; stir until the sugar is dissolved. When ready to serve, add a little shaved ice.

Apple Rotley Pudding.—Peel, core and slice tart apples; make a rich biscuit dough, roll about three-fourths of an inch thick; lay the sliced apples on the paste, roll up, tuck in the ends, prick with a fork, lay in a steamer and steam hard for one and three-fourths hours.

Everyday Good Things. If the family likes kidneys the following will be liked and they may eat them with the knowledge that they are, with liver, one of the most nourishing of our meats.

Deviled Kidneys.—Whip one-third of a cupful of butter to a cream, add one teaspoonful of dry mustard, the same of lemon juice, and salt to taste. Clean the kidneys and let them soak in water with a little salt, for an hour. Wipe dry and cut into small pieces and saute in two tablespoonfuls of butter, cook twenty minutes, add the creamed butter, one tablespoonful of Worcestershire sauce and the mustard and lemon. Stir until well seasoned, then serve on toast garnished with thin slices of lemon, sprinkled with minced parsley.

Chicken With Olives.—Cut up two young chickens into joints and cook very tender in three parts of boiling water, salt and pepper when nearly done; add one chopped onion. Drain and wipe dry, then fry until brown in any sweet fat. Strain the broth, using a large cupful for the sauce; put this into a frying pan after the chicken is cooked, add two dozen chopped green olives, a tablespoonful of capers, and when hot pour over the chicken and serve.

Apple Sponge.—Pare core and cook six tart apples to a pulp. Rub through a sieve. Mix two tablespoonfuls of flour with three tablespoonfuls of cold water, add one-fourth of a teaspoonful of salt and one cupful of boiling water. Add the apple pulp, one teaspoonful of lemon juice and sugar to taste. Beat well, remove from the heat and add three yolks of eggs well beaten. Fold in the stiffly beaten whites and bake in a shallow dish until puffed and brown.

Cream of Celery Soup.—Take three cupfuls of diced celery, cook in boiling water until tender. Press through a sieve. Scald three cupfuls of milk with a slice of onion, add the milk to the celery, removing the onion. Melt four tablespoonfuls each of butter and flour and mix well. Add to the soup, cook until smooth, serve hot with croutons.

Especially Nice Layer Cake.—Cream one and one-half cupfuls of sugar with one-half cupful of butter, flavor with one-half teaspoonful of rose extract, add one-half cupful of milk at a time with two cupfuls of sifted pastry flour with four teaspoonfuls of baking powder. Mix well, then fold in the stiffly beaten whites of eight eggs. This makes three large layers of exceptional quality. For filling use lemon or orange or a combination of both, an egg yolk, two tablespoonfuls of water with the rind and juice of a lemon and half a cupful of sugar. Cook together and add a tablespoonful of butter just before taking from the fire. Cool before adding to the cake.

What Caused Delay. The town of Colchester, Conn., in 1705 voted to postpone its celebration of Thanksgiving day from the first Thursday to the second Thursday in November. "The tradition is well supported," says a Nutmeg state historian, "that the cause was a delay in receiving a supply of molasses."

Ragpickers of Paris. In the city of Paris there are between 50,000 and 90,000 families who live by the trade of ragpicking.

SUB-ZERO WEATHER KILLS SCORE IN U. S.

Intense Suffering and Many Fires Reported.

Chicago.—Below zero weather caused 20 deaths in various parts of the country, intense suffering among the poor and caused many big fires.

Gen. John J. Pershing.

ican countries, he has expended freely of the vigor that has characterized his whole career as a soldier.

Reports which have reached Washington indicate that he has been suffering severely for weeks because of inability to receive proper dental attention. It is assumed that this trouble has been a contributing cause to the more serious developments of the last few days.

Butler Back in Marines; Will Be Sent to San Diego. Washington.—Brig. Gen. Smedley Butler is back in the marines. He was briefly but heartily welcomed home.

Last Survivor of "Lost Indian Republic" Dies. River Falls, Wis.—Charles D. Parker, ninety-eight years old, last survivor of the "Lost Republic of Indian Stream," and once lieutenant governor of Wisconsin, is dead at his home here.

J. D. Rockefeller, Jr., Buys \$1,000,000 Gotham Mansion. New York.—It has cost John D. Rockefeller, Jr., at least another \$1,000,000 to protect the investment made by himself and his father in residential holdings at Fifty-third and Fifty-fourth streets and Fifth avenue.

Rear Admiral R. Rodgers Dies Suddenly in Riviera. Monte Carlo.—Rear Admiral Raymond Rodgers, U. S. N., retired since 1911, died suddenly at the age of seventy-six. The old Spanish war hero spent much of his time abroad. He arrived in Monte Carlo a week ago, apparently in the best of health. His wife and daughter were at his bedside.

Eastman to Head I. C. C. Washington.—J. B. Eastman, last appointee of President Wilson and leader of a minority opposition in many questions of railroad consolidation and financing, will be chairman of the interstate commerce commission under the rotation system.

Three Hurt on Battleship. Boston.—Three men were injured when an acetylene gas tank exploded on the U. S. S. Florida, now in drydock at the Charleston navy yard.

Coolidge Given Bust of Father. Washington.—President Coolidge has been presented with a bust of his father, Col. John C. Coolidge, done by Bryant Baker, New York sculptor. The President is said to be pleased with the work.

Make Envoy Ambassador. Tehran.—The Soviet diplomatic representative there, M. Evrenko, has been raised to the rank of ambassador and presented his credentials as such to the shah.

Isadora Duncan's Former Husband Commits Suicide. Moscow.—Sergei Yessinina, the Russian poet from whom Isadora Duncan, the dancer, obtained a divorce last year, has committed suicide.

May Yohe's Daughter Weds. San Francisco.—Warren Deane, vice president of the Doble Steam Motor company, announced his wedding to Los Angeles to Audrie Hope, film actress and daughter of Sir Francis Hope, British nobleman, and his first wife, who was May Yohe, stage favorite.

Chase Andrew Is Dead. New York.—Chase Andrew, controller of the Rockefeller Foundation, died here. He was 44 years old.

Congressman Refuses Raise. Washington.—A check for \$298.23 has been sent by Congressman Henry St. George Tucker to the treasury each month since the passage of the measure increasing the salaries of representatives from \$7,500 to \$10,000 a year. Mr. Tucker refused to vote for the increase last March.

Druses Accept Peace Terms. London.—The chiefs of the Druse tribesmen in Syria have accepted the peace proposals made by the French.

## SOMETHING TO THINK ABOUT

By F. A. WALKER

### LAXITY AND THINKING

YOU may sometimes look forward to the accomplishment of a long cherished piece of work with expectations of immediate pleasure, but at the final moment, when your task is finished, your heart turns sick in dismay.

### WHO SAID "Pride and weakness are Siamese twins."

JAMES RUSSELL LOWELL, author of the words quoted, is known to the American public and to a great section of the British public as a poet. He is less known as an abolitionist, and yet his work in abolishing the slave trade in this country brought him more prominence during his lifetime than did his poetical work.

Lowell was born in Cambridge, Mass., February 22, 1819. Nineteen years later he was graduated from Harvard college. He early joined the ranks of the abolitionists and his "Biglow Papers" did a great deal to take the subject of slavery out of the academic class and make it a popular matter.

In 1855 he was offered the post of professor of belles-lettres at Harvard, a post held by Henry Wadsworth Longfellow. Lowell accepted the office on condition that he might have two years to study abroad. This was granted and after his tour of Europe he returned to this country and assumed the duties of professor.

The North American Review, which numbered among its famous literary names many of its editors, secured the services of Lowell in 1838. He held that position until 1872 when he resigned from the staff. During the Civil war he resumed his attacks on slavery and published a second series of the "Biglow Papers" in the Atlantic Monthly.

Following his resignation from the staff of the North American Review, Lowell again visited Europe where he was well received. On his return he was appointed minister to Spain and Great Britain successively. His death occurred in 1892.—Wayne D. McMurry.

His influence was peculiar. He had a wonderful opportunity to weld together the Dutch and the Belgian nations, after two and a half centuries of separation, but he had not the tact that was needed. Had he combined the Netherlands into one strong nation, the story of the German advance through Belgium might have read very differently.

He was born August 24, 1772, at The Hague, compelled because of the French revolution, to live first in England, then in Berlin; and not until Holland rose in revolt, after 18 years of exile, was he allowed to return.

### Among the NOTABLES

WILLIAM I.

WILLIAM FIRST of the Netherlands was another of the rulers who belonged to the ancient order of kings, believers in absolute authority. Like them, he could not see the spirit of democracy which was spreading over the world, and which was his undoing.

His influence was peculiar. He had a wonderful opportunity to weld together the Dutch and the Belgian nations, after two and a half centuries of separation, but he had not the tact that was needed. Had he combined the Netherlands into one strong nation, the story of the German advance through Belgium might have read very differently.

He was born August 24, 1772, at The Hague, compelled because of the French revolution, to live first in England, then in Berlin; and not until Holland rose in revolt, after 18 years of exile, was he allowed to return.

## THE CHANGING WORLD

By DOUGLAS MALLOCH

I GUESS the world is movin' on. But, oh, the things a man 'll miss! A lot of good, old things are gone; You don't see that, you can't have this.

Familiar things have passed away; The world keeps changin' every day; Each day they tell you at the store, "No, they don't make 'em any more."

A lot of joys have taken wings That now you'll look in vain to find; They're lost to sight, a lot of things, And very nearly lost to mind.

Now, when you ask the clerk for one, He sort of smiles, your neighbor's son, And says, "Oh, them are out of date; Here's something else that's simply great."

The livery barn down by the creek Is gone, they've built a brick garage, Take even words: a trick's a trick, But now they call it "remodeling."

The cracker barrel, the oyster can— Why, I could name a hundred, man! A hundred things you used to see That now are just a memory.

But you whose whiskers now are gray, (The younger generation shave), Don't sit around and scold and say That all that's old they ought to save.

I guess the world is movin' on; A lot of good, old things are gone, But why be sad and why be glum? A lot of good, new things have come!

## SCHOOL DAYS

THE UNFORTUNATES

## THE YOUNG LADY ACROSS THE WAY

The young lady across the way says the coal that costs the least isn't always the cheapest and one should always inquire for the kind that has the most vitamins in it.

tablespoonsful of lemon juice, one-half teaspoonful of grated lemon rind, one tablespoonful of cold water. Sift one cupful of flour with one teaspoonful of baking powder and one-eighth teaspoonful of salt, fold in lightly into the mixture. Add three stiffly beaten egg whites and pour into buttered and floured gem pans. Bake in a moderate oven for thirty minutes.

Neelie Maxwell (© 1924, Western Newspaper Union.) If you have two winks to move you might as well have six.

## BEADED GOWNS CONTINUE SWAY; OFF-THE-FACE BRIMS IN FAVOR

BEADED frocks continue to flash their glittering beauty across the path of fashion. Through levelness of coloring and unique design these beaded dresses, weighted with beads, rhinestones, pearls and lilies continue to cast their enchantment over resplendent dance, dinner and other formal evening functions.

The most entrancing models are slips of daintiness whose sole purpose seems to be to serve as a background

An Entrancing Model.

or setting which shall accent the scintillating beauty and intricacies of the beaded design worked thereon.

Like stars on a summer-night sky do rhinestones express their sparkling way on many a satin or georgette slip. Sometimes the idea is elaborated with pearl and crystal-laden pointed tabs as in the picture herewith. This exquisite frock is typical of the season's beaded modes.

There is an extensive use of tiny silver or gold beads on the modern-designed evening frock. A very handsome conception covers an almond-green georgette background heavily with design developed in the dimini-

adjustable brims. Even the newer shaded felt gigolo shapes, with tall, curiously creased crowns which are so popular, have brims which may be pulled down or rolled up at a becoming angle.

Captions such as ruffian, sombrero and pirate as applied to advance fashionable millinery suggest that brims are taking on a somewhat reckless yet fascinating freedom of lines. Which fact, however, but bespeaks the exceeding grace and picturesque-ness of hats for the immediate future.

A leading material employed in the making of midseason hats is bright-colored silk faille. Soft greens and rose tones find favor for town-wear millinery. There is a tremendous vogue for bois de rose and allied shades. Most charming with the fur coat is either a velours or faille hat

Group of Stylish Hats.

tive gold beads. There is a festooning of gold fringe in tiers about the skirt. This straight-lined frock is worn over a costume slip of gold cloth.

Pale pink and white beaded gowns which bespeak simplicity in their general aspect, but which are really wonderfully constructed, are the preferred models. These are artistically all-over patterned with rhinestones and mother-of-pearl paillettes.

Perhaps no frock more eloquently bespeaks the elegance of evening mode than does the beaded kind.

Returned to fashion's favor are off-the-face brims. It will be seen from the models here pictured that the new shapes bespeak becomingness

Black Satin Hats The newest hats for wear with fur and fur-trimmed coats are of heavy black satin closely draped to form turbans and ornamented with exquisite jeweled motifs. One is of crystal and trilliant and is in the form of a huge dragonfly.

To Keep Crib Smooth To keep the rubber sheet in baby's crib always in its place, stretch a width of cotton cloth on either side of the rubber sheeting, draw the cloth under the mattress and fasten both sides together with safety pins.

Tweeds in Blue The new blue tweeds are extremely attractive. The new shade of blue is most becoming and the dresses and suits are both simple and smart.

Shoes Combine Black-Gray Smart street shoes are made of a combination of gray and black leather and have large cut-steel buckles.

## MONARCH

Quality for 70 Years

Butter and Egg Man's Pet Unused to Sabies Harold Vanderbilt, traveling in his private car with a party of friends to California, said at a luncheon in Del Monte: "The costliest fur in the world is the silver sable. I heard a good silver sable story the other day."

Don't Forget Cuticura Talcum When adding to your toilet requisites. An exquisite face, skin, baby and dusting powder and perfume, rendering other perfumes superfluous. You may rely on it because one of the Cuticura Trio (Soap, Ointment and Talcum), 25c each everywhere.—Advertisement.

Foiling Festive Burglar To foil burglars, a device has been invented to be inserted in a door lock after the key has been removed and fastened with a padlock on the inside of the door.

Beginnings It is a wise father that knows how to pick for his child the shoestring that inevitably starts him on the road to success.—Life.

Temptation Is the balance in which character is weighed.

Area of Sweden The present territory of Sweden is about half the size of California.

Watershed The Only All-Waterproof Cloth Overshoe IT'S just what you've always wanted—a sheet of waterproof material between a durable cashmere upper and warm fleece lining! It combines the all-waterproof protection of a rubber overshoe and the lighter weight, neat appearance and warmth of a cloth gaiter.

**Total Issue, \$160,000.00**

From a letter to us by Rev. J. N. Schiltz, Pastor of the Congregation, we summarize as follows

**SECURITY:** These bonds are a direct obligation of St. Sebastian's Congregation (Catholic), a Wisconsin Corporation, and are secured by a First Mortgage on land, improvements and buildings of the Congregation. The land consists of practically a block with one block frontage on Washington Boulevard and 270 feet frontage on 55th Street and 270 feet on 54th Street. Buildings consist of a modern 14-room school, basement of new church under construction, parsonage, and Sisters' home. Buildings are of solid brick and concrete and modernly equipped throughout.

**VALUATION:** Land and buildings were appraised by the Rau Appraisal Company as follows:

Land.....	Appraisal.....	\$ 49,125.00
Buildings and Improvements.....		342,148.00
<b>Total Appraisal.....</b>		<b>\$391,273.00</b>

**Total Valuation, \$391,273.00**

**TRUST FUNDS:** In the opinion of Counsel these bonds are legal for Trust Fund Investment in Wisconsin.

**INSURANCE:** \$160,000.00 of Fire Insurance and ample Tornado Insurance on the buildings in "Old Line" insurance companies are assigned to the Trustee for the protection of these Bonds.

**TERRITORY:** The parish includes about one square mile in one of the wealthiest, best improved and most beautiful parts of Milwaukee. It is bounded by 47th Street and Highland Boulevard on the East, by Chestnut Street on the South, by 9th Avenue of Wauwatosa on the West and by North Avenue on the North, in each case including both sides of the streets named.

All legal details in connection with this issue of Bonds have been passed upon by Messrs. O'Meara & O'Meara, Attorneys, West Bend, Wisconsin

These Bonds are offered when, as and if issued and received by us subject to prior sale

**When You Get to Florida**

**Investigate HAINES CITY**

THE foremost of these actualities are four in number: (1) Nature's gift of the superb location; (2) Unexcelled facilities for rail and motor transportation; (3) A rapidly growing group of industries; (4) and a highly competent city management.

\$5,000,000 will be spent on buildings for residential and business purposes during the next six months, according to Mayor Eugene C. Bryan's conservative estimate.

**An Ideal Place to Live**

Haines City is an ideal place to live in, 221 feet above sea level, many lakes and groves within the city limits, offer every opportunity for social, educational, commercial and financial advance.

So much is going on in Haines City, so many developments, and such continual advances, that one must really visit Haines City to fully appreciate and visualize the vast opportunities.
