Salts Fine for Aching Kidneys

When Back Hurts Flush Your Kidneys as You Clean Your Bowels

Most folks forget that the kidneys, like the bowels, sometimes get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver, acid stomach, sleeplessness and all sorts of bladder disorders. You simply must keep your kidneys active and clean and the moment you feel an ache or pain in the kidney region begin drinking lots of water. Also get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and is intended to flush clogged kidneys and help stimulate them to activity. It also helps neutralize the acids in the urine so they no longer irritate, thus helping to relieve bladder disorders. Jad Salts is inexpensive; makes a delightful effervescent lithia water drink which everybody should take now and then to help keep their kidneys clean.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in trying to correct kidney trouble while it is only trouble.

The "Ah Man" Is the Latest
The "yes man" of the movies now has a companion known as the "ah man." Just as the yes man follows the director around answering "yes" to every query, the ah man stands behind the cameraman and heaves an "ah-h-h-h" of admiration every time a good shot is made.
Examination of the mummy of King Tut-Ankh-Amen showed that his ears were pierced, and earrings were found in an outer casket.

Credit Goes to Maxim for Idea in Aviation

Hiram S. Maxim is believed to be the first to prove that a body heavier than air could be lifted by its own motive power. His crude and complicated machine accomplished the feat in July, 1884. It was supplied with screw propellers weighing 135 pounds each and measuring 17 feet 10 inches over the tips of the blades. These were attached to a shaft that ran at an average speed of 375 revolutions a minute, operated by a pair of compound engines, supplied with steam from a combined multitubular boiler, feed-water heater and gas-heating burner, weighing 1,000 pounds, provided with 7,050 jets, the boiler having a heating surface of about 800 feet. The entire machine, together with its full equipment of fuel, water and men, weighed less than 8,000 pounds. A writer in Cassier's Magazine, in 1895, observed: "As a mechanical structure this machine is unquestionably a masterpiece of work and it has been appropriately described by an eminent engineer as 'not an invention, but a museum of inventions.'"—Kansas City Star.

Keep Your Butter Uniform and Hold Your Customers

Don't wait for your customers to complain about the variable color of your butter. Keep your butter that golden June color everybody likes by putting a few drops of Dandelion Butter Color into the churn. It is purely vegetable, wholesome and absolutely tasteless. It meets all State and National Food laws. All large creameries have used Dandelion Butter Color for years. It does not color or buttermilk. You can get the large bottles for 3c from all drug or grocery stores.

"Power" Enough
The negro teacher was tall and powerful of frame, and as he preached he whacked the pulpit cushion with hammer-like strokes of his massive fist. But his preaching consisted simply of the repetition of one phrase: "May the Lord give us more power. More power, O Lord!"

At last a small negro got up in the back of the church, a disgusted expression on his face, and called out in piping tones: "What you all need, Bruddah Robbins, is not moab power, but moab ideas!"

Some Early History of Motor Car of Today

The history of the motor car began more than 230 years ago, when Street, an English inventor, first utilized oil as a motive power. It was not until 1870 that a really practical gasoline engine appeared. It was the work of Julius Hock of Vienna.

The next name connected with the progress of the motor car is the most important of all—that of Gottlieb Daimler. In 1883 Daimler made the first small, high-speed petrol engine; all previous engines had been huge, clumsy and slow moving.

Two years later he installed his engine in a motor bicycle, and at the same time fitted boats with motors and ran them at Paris.

The boats attracted the attention of Levassor, another famous pioneer, who at once saw the immense possibilities in Daimler's invention. He bought the French patents from the inventor. Levassor invented a system of transmission—a method of taking the power from the engine to the wheels—and with a few small improvements this system is in use today.—London Tit-Bits.

Farms Raise Own Gas
Farms may be made to produce their own gas for use in cooking, heating and lighting, according to the inventor of a generator that makes gas from the waste products of the farm. Cotton, cornstalks, straw and sawdust have been employed successfully, says Popular Mechanics magazine, a ton of material producing about 1,000 cubic feet of gas.

GRIND

Don't Let Who'e Grain Cheat You

Whole grain is bulky and it fills the animal's stomach, but it satisfies you by satisfying the hunger through this bulk rather than through complete nourishment. Tests have been conducted by government stations in past years, with healthy, full-toothed animals to determine the seriousness of these feeding losses. The tests show an average loss of from 12 to 26 per cent. In other words, out of 100 bushels of whole corn fed, 26 bushels yield practically no nourishment while passing through the digestive tract. The unground oat diet shows a similar loss of 12 bushels out of every 100. Such feeding losses can easily spell the difference between possible loss and a handsome profit. Many farmers are putting various combinations of grains through the McCormick-Deering Feed Grinder, assuring their animals a nourishing ration, that is quickly and completely assimilated. In the interests of greater stock-raising profits, investigate the McCormick-Deering at our store.

SMITH'S FINE IS SET AT \$500

Rollie A. Smith, of Campbellsport, was sentenced to serve six months in the county jail and to pay a fine of \$500 when arraigned in circuit court last Friday, before Judge Oscar Fritz at Fond du Lac. Attorney Frank Cosgrove, appeared as Smith's counsel, immediately entered a motion for a stay of execution in order that he might file a writ of error to the supreme court. Judge Fritz consented to a stay of 30 days in which to file the writ upon the condition that Smith file a \$1,500 bond for his appearance in the event that the writ is not filed or the supreme court ruling denies a new trial. Smith was arrested following a raid on his premises at Campbellsport on March 12, 1927, at which time five gallon containers alleged to have held "moonshine" were seized by officers.

Lasting Monuments

If we work upon marble, it will perish; if we work upon brass, time will efface it; if we rear temples, they will crumble into dust; but if we work upon immortal minds, if we imbue them with principles, and with the just fear of God and love of our fellow men, we engross on those tablets something which will brighten all eternity.—Daniel Webster.

Ocean Currents

The great current of the Pacific ocean is the Kuro Shio or Japan current, having its source in the north equatorial current. It does not send off a branch into the Bering sea as is commonly supposed. The northerly current of the Bering sea is due to local conditions.
