CONSTANT EXPANSION

—to serve Chevrolet owners better

SINCE January 1st more than a million new Chevrolets have been delivered to owners—making the Chevrolet Motor Company, for the second consecutive year, the world's largest builder of automobiles!

under the supervision of Chevrolet engineers. This equipment definitely assures maximum speed and precision and the lowest possible cost in the performance of every Chevrolet service and repair operation—which are charged for on a flat rate basis.

This outstanding achievement has been attained not only because of the quality and value of Chevrolet cars—but also because there has been a constant expansion of Chevrolet service facilities.

Furthermore, all of these tremendous facilities have been made available to 15,000 authorized service stations manned by skilled mechanics, over 25,000 of whom have been factory trained to efficiently handle every repair operation on a Chevrolet car. In addition, there are over 4,000 other points where genuine Chevrolet parts may be obtained.

In order to bring these mammoth facilities of the Chevrolet factories to Chevrolet dealers and owners everywhere, there have been erected 26 huge parts warehouses in the principal centers of distribution. This expansion program is continually going on—for four great additional warehouses will be in operation by January first and seven more by the summer of 1929.

Uniformly efficient, uniformly reliable and within easy reach of everybody everywhere—this great service organization is maintaining at peak efficiency the fine performance for which Chevrolet cars have always been renowned.

Into the service departments of all Chevrolet dealers, Chevrolet has brought special tools and shop equipment—designed to help you take better care of your Chevrolet.

CHEAP WRITING

He—When I wanted to write you my thoughts were so heavy I couldn't

express them." She (lightly)—"Why didn't you send them by freight?"

With a Punch
Elna—But, father, Clifford has character—you can read it in his eye. Her Father—Well, if that's the case I'm going to blacken his character.

Suspicious Student
"What are you studying now?"
"Caesar."
"Interested?"
"Yes. But Caesar gets so much the

best of everything that it begins to sound to me like schoolbook propaganda."

Advice
"T're are many momentous questions before the people."
"There are," answered Senator Sorghum.
"What do you think is the most important advice to be given?"
"For a starter, the most important advice would be, 'Don't everybody try to talk at once.'—Washington Star.

Cattle Industry Now Recovering

Stimulus to Increased Production Seen in Increased Feed Crops.

(Prepared by the United States Department of Agriculture.)

A stimulus to increased production of hogs, cattle and dairy animals is seen by the bureau of agricultural economics, United States Department of Agriculture, in the increased feed crops this year.

Live stock producers, including dairymen, cattlemen, hog and sheep raisers, says the bureau in a report on the agricultural situation, are in relatively good shape, with the presumption that live stock prices and the prospective feed situation may stimulate increased production of animals.

Cattlemen already are beginning to enlarge their herds, the bureau reports, but some time is required to produce and raise steers, and to get heifer calves grown into milk cows. Meantime there is more or less widespread complaint among consumers over the increased prices of meat, particularly beef and veal.

Meat Price Situation.

The current meat price situation "is inevitable," says the bureau. "For six years, beginning in 1920, the cattle industry was hit on its back, with western cattlemen going bankrupt on all sides and their stock almost without market value. It is doubtful if this country ever witnessed a more acute case of distress in its agricultural industries than this depression in cattle."

"Slowly and painfully the cattle industry liquidated its surplus, reduced its breeding herds, and is recovering from its financial wounds. The consuming community was told again and again that the outcome would surely be a period of cattle scarcity and high prices. Now we are up against that period."

Abundant Feed Crops.

Discussing the crop situation, the bureau says:

"The feed crops are abundant, grain being decidedly more so than last year. Moreover, in spite of its late planting it made such rapid progress during the summer as to be fairly well matured before the first frosts. The eastern corn belt, which had almost a failure of the crop last season, has ample corn this time, whereas the southern states are estimated to have about 14 per cent less corn than last year."

"Oats are a decidedly heavier crop this season than last, the September 1 estimate indicating nearly 300,000,000 bushels more. This abundance of feed grains, coupled with a hay crop of

about average size, will tend to strengthen the position of the live stock industries during the coming year."

Some recession in purchasing power of farm products in terms of other commodities is reported by the bureau, the index for August being placed at 89 as compared with 93 in June and July, the five-year period, 1909-14, being used as a base of 100.

Pests Worry and Kill Many Growing Pullets

Among the difficulties encountered by poultry keepers in growing pullets are those raised by pests. It is most discouraging to have a nice bunch of pullets about ready to lay killed by dogs, skunks or weasels, or stolen by thieves.

Strong wire, firmly nailed in place, will help greatly to keep out some of these pests. Wire cloth is even better than the regular poultry netting. It is a wise plan to close all doors, including small exit doors, at dusk after the pullets have all gone to roost. This means opening them the first thing in the morning so the birds can get the benefit of the early morning sun.

While range houses or shelters are used that have the four sides made of wire, it is a good plan to have the floor made of wire cloth, about two meshes to the inch, so animals cannot get at the birds from this direction.

Some poultrymen who raise a number of pullets each year guard against theft by hiring a man to sleep in one of the range houses close by, armed with a shotgun, so he can be on hand if needed. They have found this good insurance.

Fall Fertilizing Best Practice for Hay Land

Why not apply a top dressing of phosphate or potash mixtures to hay lands this fall?

Many farmers are finding it a practice that pays.

New seedlings respond well to fall application of these mixtures, although in a general soil building program it is usually considered best to apply them in the spring at seeding, according to C. J. Chapman, of the soils department at the Wisconsin College of Agriculture.

Chapman points out that this late application, which may be made any time between harvest and frost, has two distinct advantages. It stimulates fall growth and, at the same time, becomes more thoroughly incorporated with the surface soil in advance of the growing season.

BOOK FARMING WILL GIVE MOST INFORMATION ABOUT BUSINESS

Tells Story of Year's Work in Dollars and Cents.

We used to have a good deal of fun at the expense of the book farmer. Some book farmers have the laugh on the rest of us, however. The boys who at the end of the year can turn to their farm account books and show the figures, black and white, which tell the financial story of the year's work, accomplishments, profits and losses, are the ones who really know "where they are at." The keeping of adequate farm accounts requires but a few hours' work during the year. It is not half such a chore as it might seem. No piece of work during the year will give you so much return in satisfaction. In real information about your own business, in checks and balances on what you are doing with your time and energy, as a simple but complete story in figures, in dollars and cents, in hours of work and yields of acres found in your farm account book, says the Illinois Farmer.

January is the best time to open such a book. If you do not already keep one. Farmers who do not are in the majority. Now you have time to take a simple inventory of what you have and what you owe, and to make the start toward farm bookkeeping. You don't need to operate a set of double entry books to have an adequate farm accounting system but you do need a better information file than your memory. Our state college of agriculture will give you all sorts of helpful suggestions for the asking, and most anyone can follow the simple rules laid down in any good farm account book. Once started, you will find a lot of interest in keeping up the entries and balancing your business at the end of the year. No other

business but farming would even try to get along without an accounting system, and, in fact, the farming business has not done so very well without it.

Animals Susceptible to Anthrax Disease

All farm animals, with the exception of poultry, are susceptible to anthrax and man himself is not exempt. There are districts where the germ is in the soil, and there always is danger. For reasons unknown, anthrax may be more prevalent one year than another.

The germs are present in enormous numbers in all parts of the body of animals dying with the disease. All carcasses should be destroyed by burning or should be buried deeply without cutting into them. Sudden deaths among live stock in anthrax districts always should prompt the suspicion that this disease was the cause. Vaccination usually is a successful means of prevention.

Around the Farm

A cow must have three quarts of water for every quart of milk she produces.

The good live stock farmer shelters properly his family and his animals. Both should be comfortable at all times.

More beef breeding herds on corn belt farms, will result in a more profitable and permanent type of agriculture than is now found.

A thorough cleaning of the house and its interior fixtures is essential. Some good coal tar dip can be used effectively in this connection.

No matter whether hog cholera is known to exist or not, the farmer who raises hogs must always presume that there is a possibility of an outbreak.

The construction of expensive, elaborate poultry houses is not encouraged, but on the other hand, no farmer should construct a poultry house that is not durable and comfortable.

Light and ventilation are two essentials for contented hens and high egg production. There should be plenty of window space in the front of the house, so that the sunlight will strike all corners of the door.

Prior to lambing the ewe should be placed in a small pen and left there until the lamb is quite strong. On the other hand, if they are allowed to lamb with the flock it is almost impossible to give them the necessary attention and serious losses will often result.

Prune Gooseberry Bush for Health and Yield

Too little pruning done during the dormant season last fall was responsible for the poor yields from healthy gooseberry bushes, about which considerable complaint was made this past season, according to Dr. A. S. Colby of the University of Illinois. Growers therefore should not hesitate to prune heavily in their small fruit plantations this fall, removing the oldest canes of currants and gooseberries and some of the strong as well as all of the weak canes of the brambles. The laterals also should be cut back about one-half on raspberry and blackberry bushes.

"This is the best time to prepare the bush fruits and brambles for the winter. Pruning small fruits in the dormant season is generally recommended, partly because of the time available when other work is not so pressing. The earlier it is done the better, because insects, such as tree crickets and cane borers, and diseases, like anthracnose, crown gall and cane blight are controlled more satisfactorily by early removal of infested wood.

Grandfather's pipe can well be a family souvenir. After fifty years it is comparatively inodorous.

Isn't it queer how the philanthropist's benefactions to your circle?

What if an effort had been made to create the world in a different way? What would have happened?
